1

INDUSTRIAL AND SYSTEMS ENGINEERING (I SY E)

I SY E1 – COOPERATIVE EDUCATION PROGRAM 1 credit.

Work experience which combines classroom theory with practical knowledge of operations to provide students with a background upon which to base a professional career in industry.

Requisites: Sophomore standing

Course Designation: Workplace – Workplace Experience Course **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work Audience: Undergraduate

2. Synthesize and apply appropriate technical education to real world technical work Audience: Undergraduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise Audience: Undergraduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information Audience: Undergraduate

I SY E 191 – THE PRACTICE OF INDUSTRIAL ENGINEERING 2 credits.

An introduction to industrial engineering subject matter areas, problem types, and design/analysis approaches, techniques, and methodologies. Special emphasis on formulation and design alternatives for problem solving.

Requisites: None Repeatable for Credit: No Last Taught: Spring 2025 Learning Outcomes: 1. Define and explain common industrial engineering terminology Audience: Undergraduate

2. Give examples of career opportunities in industrial engineering Audience: Undergraduate

3. List the focus areas in industrial engineering and give a brief explanation of how each area uses industrial engineering principles Audience: Undergraduate

4. Give examples of problems in each area of industrial engineering Audience: Undergraduate

5. Identify professional and academic development resources available to industrial engineering students Audience: Undergraduate

6. Investigate an open-ended industrial engineering problem and think critically about how to solve it Audience: Undergraduate

7. Analyze small datasets using Microsoft Excel Audience: Undergraduate

I SY E 210 – INTRODUCTION TO INDUSTRIAL STATISTICS 3 credits.

Introduction to basic probability and statistical tools and methods from an industrial application perspective. Random variables and probability distributions; descriptive statistics; point estimates. Perform hypothesis testing, construct confidence intervals, and understand design of experiments in the context of motivating case studies. Regression and correlation analysis. Focus on applying statistical methods and tools to solve engineering problems. Use of Microsoft Excel to interpret and analyze data.

Requisites: (MATH 211, 217, or 221) or member of Engineering Guest Students

Repeatable for Credit: No Last Taught: Spring 2025 Learning Outcomes: 1. Articulate the importance of statistics in engineering applications Audience: Undergraduate

2. Summarize and describe data using descriptive statistics and graphical methods Audience: Undergraduate

3. Perform basic statistical analysis on datasets Audience: Undergraduate

4. Design simple experiments with data for the purpose of statistical analysis Audience: Undergraduate

5. Use Excel to describe, analyze, graph, and interpret data Audience: Undergraduate

6. Apply linear and multiple regression techniques Audience: Undergraduate

7. Apply experiment and analysis techniques to areas of engineering such as Statistical Process Control Audience: Undergraduate

8. Apply basic probability concepts such as random variables, independence, and probability distributions Audience: Undergraduate

I SY E 312 – DATA MANAGEMENT AND ANALYSIS FOR INDUSTRIAL ENGINEERS

3 credits.

Fundamentals of data management and analysis. Formulating and solving real industrial engineering problems with appropriate data managing and modeling strategies. Fundamental industrial database management strategies, data preprocessing, visualization and modeling techniques; industrial database management and analysis techniques using leading programming software (MySQL and R).

Requisites: (I SY E 210, E C E 331, MATH/STAT 309, STAT 311, or 324) or member of Engineering Guest Students

Repeatable for Credit: No

Last Taught: Spring 2025 Learning Outcomes: 1. Demonstrate knowledge of fundamental

industrial database management strategies

Audience: Undergraduate

2. Apply data preprocessing, visualization, and modeling techniques Audience: Undergraduate

3. Apply industrial database management techniques using structured query language (SQL) Audience: Undergraduate

4. Use leading programming software to perform data regression analysis Audience: Undergraduate

5. Create and solve a real-life industrial data analytics problem, and present results effectively to audience Audience: Undergraduate

I SY E 313 – ENGINEERING ECONOMIC ANALYSIS

3 credits.

Financial accounting principles and cost systems, interpretation and use of accounting reports and supplemental information for engineering economic analyses, consideration of cost-volume-profit analyses, use of discounted cash flow techniques, flexible budgeting, transfer pricing, and capital budgeting.

Requisites: (MATH 217, 221, or concurrent enrollment), graduate/ professional standing, or member of Engineering Guest Students **Repeatable for Credit:** No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply discounted cash-flow analysis to evaluate proposed capital investments Audience: Undergraduate

2. Recognize, formulate, and analyze cash-flow models Audience: Undergraduate

3. Explain model results to managers and other non-specialist decision makers Audience: Undergraduate

I SY E 315 – PRODUCTION PLANNING AND CONTROL 3 credits.

Techniques and applications of control concepts in the design of inventory, production, quality, and project-planning systems; use of the computer as a component in such systems.

Requisites: (I SY E 210, E C E 331, MATH/STAT 309, STAT 311, 324, 371, MATH/STAT 431, 531, or concurrent enrollment), graduate/professional standing, or member of Engineering Guest Students

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Describe and apply fundamental principles and methodologies relevant to planning, design, operation, and control of production planning and control systems Audience: Undergraduate

2. Describe and explain how organizational strategy drives operations management approaches and supply chain decisions Audience: Undergraduate

3. Develop a portfolio of analytical tools and skills related to production planning and control and operations management Audience: Undergraduate

4. Recognize situations in production system environments that suggest the use of appropriate quantitative methods to assist in decision-making Audience: Undergraduate

5. Apply skills and tools to reduce waste and to increase productivity and quality in manufacturing and service organizations Audience: Undergraduate

I SY E 320 – SIMULATION AND PROBABILISTIC MODELING 3 credits.

Analysis of stochastic systems using both analytic methods and computer simulation. Empirical and theoretical models of arrival and service processes. State spaces and state transition probabilities. Simulation of queuing and manufacturing systems. Continuous time Markov analysis of manufacturing systems. Simulation project management, testing and emerging trends.

Requisites: (MATH/STAT 309, STAT 311, MATH/STAT 431, 531 or concurrent enrollment) and (I SY E 210, E C E 331, STAT/MATH 310, STAT 312, 324, 371, or concurrent enrollment) and (MATH 320, 340, or concurrent enrollment), or member of Engineering Guest Students **Repeatable for Credit:** No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply knowledge of math, science, and engineering principles to model real stochastic systems Audience: Undergraduate

2. Identify, formulate, and solve problems using appropriate data analytic and simulation approaches Audience: Undergraduate

3. Understand and apply probabilistic modeling techniques such as Markov Chains and queueing theory to study stochastic systems Audience: Undergraduate

4. Apply statistical methods to analyze stochastic behaviors of the systems Audience: Undergraduate

5. Apply simulation software to model the process and evaluate performance measures of the systems Audience: Undergraduate

I SY E 321 – SIMULATION MODELING LABORATORY

1 credit.

Computer exercises involving generation and analysis of random variables, spreadsheet models of queuing systems, use of simulation software packages. Project. **Requisites:** Concurrent enrollment in I SY E 320

Repeatable for Credit: No Last Taught: Spring 2025

Learning Outcomes: 1. Apply knowledge of math, science, and engineering principles to model real stochastic systems Audience: Undergraduate

2. Identify, formulate, and solve problems using appropriate data analytic and simulation approaches Audience: Undergraduate

3. Understand and apply probabilistic modeling techniques such as Markov Chains and queueing theory to study stochastic systems Audience: Undergraduate

4. Apply statistical methods to analyze stochastic behaviors of the systems Audience: Undergraduate

5. Apply simulation software to model the process and evaluate performance measures of the systems Audience: Undergraduate

I SY E 323 – OPERATIONS RESEARCH-DETERMINISTIC MODELING

3 credits.

Basic techniques for modeling and optimizing deterministic systems with emphasis on linear programming. Computer solution of optimization problems. Applications to production, logistics, and service systems. **Requisites:** MATH 222 and (MATH 340, 341 or 375), or member of Engineering Guest Students

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Write an algebraic formulation of an optimization model that captures the main decision elements of practical problems Audience: Undergraduate

2. Use an algebraic modeling language to solve an optimization model Audience: Undergraduate

3. Model logical constraints using binary decision variables Audience: Undergraduate

4. Understand the basic ideas behind algorithms for solving linear programming and discrete optimization problems Audience: Undergraduate

I SY E 348 – INTRODUCTION TO HUMAN FACTORS ENGINEERING LABORATORY

1 credit.

Hands on experience applying concepts discussed in I SY E/PSYCH 349. Complete a small three-part design project. Learn how to measure light, sound, anthropometric, and psychophysiological data, and then apply these measurements to product and workplace design challenges. **Requisites:** Declared in Industrial Engineering and concurrent enrollment in I SY E/PSYCH 349, or member of Engineering Guest Students

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Recognize the strengths and limits of human perceptual, cognitive and physical abilities and their implications for system design Audience: Undergraduate

2. Describe human factors tools, techniques and methods commonly used to design and improve system performance Audience: Undergraduate

3. Evaluate and recommend work and task designs based on human factors and ergonomic principle Audience: Undergraduate

4. Define the ethical application of human factors in designing products and processes Audience: Undergraduate

I SY E/PSYCH 349 – INTRODUCTION TO HUMAN FACTORS 3 credits.

Conveys the importance of considering human capabilities and limits in system design and operation. This includes understanding human characteristics from the cognitive, physical, and psychosocial perspectives. Implications of these characteristics are explored through understanding the needs of people, designing to support these needs, and evaluating systems to ensure they serve the intended purpose. Case studies are used to identify the human role in accidents and to identify design improvements. Application domains include consumer product design, human-computer interaction, workplace safety, and complex systems such as healthcare delivery.

Requisites: (I SY E 210, E C E 331, MATH/STAT 309, 431, STAT 311, 324, 371, MATH 531, PSYCH 210, or C&E SOC/SOC 360, or concurrent registration), graduate/professional standing, or member of Engineering **Guest Students**

Course Designation: Breadth - Physical Sci. Counts toward the Natural Sci rea

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Recognize the strengths and limits of human perceptual, cognitive and physical abilities and their implications for system desian Audience: Undergraduate

2. Describe human factors tools, techniques and methods commonly used to design and improve system performance Audience: Undergraduate

3. Evaluate and recommend work and task designs based on human factors and ergonomic principles Audience: Undergraduate

4. Define the ethical application of human factors in designing products and processes Audience: Undergraduate

I SY E 350 – INDUSTRIAL ENGINEERING DESIGN I

3 credits.

Introduction to the tools needed for advanced design courses through experiential learning and hands-on opportunities to conduct experiments, take relevant measurements, analyze real-world data, design systems, and to make and test prototypes of designs.

Requisites: Declared in Industrial Engineering, (COMP SCI 200, 220, 300, 301, 302, or placement into COMP SCI 300), (I SY E 210, MATH/ STAT 309, 431, MATH 531, STAT 311 or 324) and I SY E 315

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply basic industrial engineering design methods

Audience: Undergraduate

2. Use appropriate industrial and systems engineering design tools forestablishing solutions to open-ended problems Audience: Undergraduate

3. Select the appropriate methods to utilize in order to collect real-world data Audience: Undergraduate

4. Observe and collect data relevant to an industrial engineering problem Audience: Undergraduate

I SY E 389 – HONORS IN RESEARCH

1-3 credits.

Undergraduate honors research projects supervised by faculty members. **Requisites:** Declared in Industrial Engineering Honors in Research Course Designation: Honors - Honors Only Courses (H) Repeatable for Credit: Yes, unlimited number of completions Last Taught: Spring 2013 Learning Outcomes: 1. Conduct and report on independent industrial engineering research Audience: Undergraduate

2. Independently develop industrial engineering research questions Audience: Undergraduate

3. Appropriately utilize online and library resources Audience: Undergraduate

I SY E 412 – FUNDAMENTALS OF INDUSTRIAL DATA ANALYTICS 3 credits.

Provides an understanding of the fundamentals of using data analytics to make data-driven decisions. Emphasizes applying techniques to industrial engineering problems. Focuses on formulating and solving real industrial problems with the appropriate modeling strategies and analytics principles for better decision making.

Requisites: (I SY E 210, E C E 331, STAT 311, 324, MATH/STAT 309, 431, or MATH 531), graduate/professional standing, or member of Engineering Guest Students

Repeatable for Credit: No Last Taught: Spring 2025

Learning Outcomes: 1. Apply fundamental knowledge of industrial data analytics concepts, problems, and techniques Audience: Undergraduate

2. Integrate data analytics techniques with industrial and systems engineering domain knowledge to appropriately formulate problem statements and facilitate decision making Audience: Undergraduate

3. Implement software programming skills to perform data analysis Audience: Undergraduate

4. Apply industrial data analytics methods and tools to solve real-world industrial engineering problems Audience: Undergraduate

I SY E 415 – INTRODUCTION TO MANUFACTURING SYSTEMS, DESIGN AND ANALYSIS

3 credits.

Introduction to the technologies, processes and systems of modern discrete part manufacturing. Emphasis on development of an understanding of the behavior of integrated systems.

Requisites: I SY E 315 or member of Engineering Guest Students Repeatable for Credit: No Last Taught: Spring 2025

Learning Outcomes: 1. Distinguish advantages and disadvantages for a range of manufacturing processes Audience: Undergraduate

2. Select an appropriate manufacturing process when given information such as part design, material, and production quantity Audience: Undergraduate

3. Use terminology that relates to manufacturing systems design and analysis Audience: Undergraduate

4. Examine manufacturing system performance by applying analytical techniques such as line balancing, manufacturing system benchmarking, inventory models, and queuing formulas Audience: Undergraduate

5. Utilize computer-aided design and manufacturing software to display part geometry and create toolpaths for a CNC program Audience: Undergraduate

I SY E 417 – HEALTH SYSTEMS ENGINEERING

3 credits.

Introduction to the application of industrial engineering methods to the analysis and improvement of health care delivery. Exploration of common problems of decision making and control in health care. Examination of social, regulatory and economic factors unique to health care. **Requisites:** I SY E 320 and 349, graduate/professional standing, or member of Engineering Guest Students, or declared in Clinical and Community Outcomes Capstone Certificate

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Describe and explain the purpose of the various components that make-up many health systems including public health agencies (e.g., CDC), hospital systems, emergency medical services (e.g., 9-1-1), healthcare providers, and health insurance Audience: Undergraduate

2. Identify problems within health systems that may be amenable to industrial engineering tools Audience: Undergraduate

3. Apply industrial systems engineering concepts and tools (e.g., regression, queueing theory, simulation, cost-benefit analysis, and machine learning) to specific problems in healthcare Audience: Undergraduate

I SY E/COMP SCI/MATH 425 – INTRODUCTION TO COMBINATORIAL OPTIMIZATION

3 credits.

Focuses on optimization problems over discrete structures, such as shortest paths, spanning trees, flows, matchings, and the traveling salesman problem. We will investigate structural properties of these problems, and we will study both exact methods for their solution, and approximation algorithms.

Requisites: (MATH 320, 340, 341, or 375) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

Course Designation: Breadth - Physical Sci. Counts toward the Natural Sci req

Level - Intermediate L&S Credit - Counts as Liberal Arts and Science credit in L&S **Repeatable for Credit:** No **Last Taught:** Fall 2024

Learning Outcomes: 1. Identify and use the structural properties of combinatorial optimization problems Audience: Undergraduate

2. Apply algorithms for the solution -exact or approximate- of a combinatorial optimization problem Audience: Undergraduate

3. Explain why the algorithms studied are correct and understand their running time Audience: Undergraduate

I SY E 450 – INDUSTRIAL ENGINEERING DESIGN II

3 credits.

Team-based project experience to address a real-world design challenge posed by an external organization. Collaboration with the project client to design a new system or process, or redesign an existing one, by integrating and applying appropriate Industrial and Systems Engineering knowledge, methodologies and tools for problem definition and analysis; idea generation; solution development, evaluation and justification; and implementation planning and impact assessment.

Requisites: Senior standing only, I SY E 313, 320, 323, 350, and PSYCH/ I SY E 349

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Employ design thinking, and engage the client in the creative process for problem space exploration and idea generation Audience: Undergraduate

2. Utilize a structured modeling, analysis and decision#making framework to design a new system or process, or re#design an existing one Audience: Undergraduate

3. Choose, synthesize and effectively utilize appropriate ISyE methods, concepts, engineering standards, and modeling and analysis tools in all facets of the project lifecycle Audience: Undergraduate

4. Adjust and be flexible with design strategy and adapt it suitably to address unanticipated issues during project execution Audience: Undergraduate

5. Hone skills in teamwork, oral and written communication, and project management Audience: Undergraduate

I SY E 468 – INTRODUCTION TO INDUSTRIAL ENGINEERING RESEARCH

1 credit.

An introduction to the practice of conducting research in industrial engineering, literature reviews, identifying gaps in existing work, writing a research proposal.

Requisites: Consent of instructor Course Designation: Honors - Honors Only Courses (H) Repeatable for Credit: No Last Taught: Spring 2025 Learning Outcomes: 1. Conduct a literature review Audience: Undergraduate

2. Identify gaps in existing research Audience: Undergraduate

3. Describe characteristics of a good research question Audience: Undergraduate

4. Write a proposal to address an open research question Audience: Undergraduate

5. Describe some current active research areas in industrial engineering Audience: Undergraduate

I SY E 478 – RESEARCH AND BEYOND IN INDUSTRIAL ENGINEERING

1 credit.

An introduction of skills required for successful research in graduate school. Preparing for graduate thesis writing, applying for graduate school, presenting research in a variety of ways. How to foster mental health and work-life balance.

Requisites: I SY E 468 Course Designation: Honors - Honors Only Courses (H) Repeatable for Credit: No Last Taught: Fall 2023 Learning Outcomes: 1. Prepare materials for graduate program applications, such as a personal statement Audience: Undergraduate

2. List key elements of research ethics and common pitfalls in different types of research Audience: Undergraduate

3. Make a poster summarizing completed and/or in-progress work Audience: Undergraduate

4. Give a technical presentation summarizing completed and/or inprogress work Audience: Undergraduate

5. Critique technical research presentations Audience: Undergraduate

6. List strategies for maintaining healthy work-life balance in graduate school Audience: Undergraduate

I SY E 489 – HONORS IN RESEARCH 1-3 credits.

Undergraduate honors research projects supervised by faculty members. **Requisites:** Declared in Industrial Engineering Honors in Research **Course Designation:** Honors - Honors Only Courses (H) **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Fall 2023 **Learning Outcomes:** 1. Conduct and report on independent industrial engineering research Audience: Undergraduate

2. Independently develop industrial engineering research questions Audience: Undergraduate

3. Appropriately utilize online and library resources Audience: Undergraduate

I SY E/M E 510 - FACILITIES PLANNING

3 credits.

Introduction to plant location theory and analysis of models of plant location; models for determining plant size and time phasing; line balancing models; techniques for investigating conveyor and other material handling problems; and models of plant layout.

Requisites: I SY E 315, (I SY E 323 or E C E/COMP SCI/I SY E 524) and I SY E/PSYCH 349, or graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Identify, formulate, and solve facilities layout problems by applying principles of engineering and mathematics Audience: Both Grad & Undergrad

2. Apply engineering design to produce facilities design solutions that meet specified needs with consideration of productivity, safety, and economic factors Audience: Both Grad & Undergrad

3. Utilize computer software to study and illustrate the operation of a manufacturing system Audience: Both Grad & Undergrad

4. Collaborate with a team to develop solutions to engineering problems and communicate findings effectively Audience: Both Grad & Undergrad

5. Demonstrate ability to lead a facilities planning project integrating quantitative techniques and management tools Audience: Graduate

I SY E/M E 512 – INSPECTION, QUALITY CONTROL AND RELIABILITY

3 credits.

Inspection data for quality control; sampling plans for acceptance inspection; charts for process control. Introduction to reliability models and acceptance testing.

Requisites: (STAT/MATH 309, STAT 311, 224, 324, or STAT/MATH 431), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply statistical process control analysis for measuring and controlling quality Audience: Undergraduate

2. Recognize, formulate, and analyze univariate continuous and discrete control charts Audience: Undergraduate

3. Use Minitab to perform basic statistical process control analysis Audience: Undergraduate

4. Communicate the results of the statistical process control analysis to management and other non-specialist users of engineering analyses Audience: Undergraduate

5. Recognize, formulate, and analyze advanced continuous control charts Audience: Graduate

6. Perform process capability and measurement system capability analysis

Audience: Graduate

I SY E 515 – ENGINEERING MANAGEMENT OF CONTINUOUS PROCESS IMPROVEMENT

3 credits.

Addresses the role of the industrial engineer as a "manager" of continuous improvement in design and production processes. Provides modern tools and techniques for planning and managing team projects, integrating the concepts of total quality, data based decision making, and resource management.

Requisites: Senior standing and INTEREGR 397 (formerly E P D 397) or concurrent enrollment, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Describe and explain the nature of and tools for change management and continual process improvement Audience: Both Grad & Undergrad

2. Experience the role of the industrial and systems engineer as a "manager" of continual process improvement Audience: Both Grad & Undergrad

3. Work effectively on a team-based experiential project focused on process design, analysis, and resource management and integrating the concepts of continual improvement, customer focus, and teamwork Audience: Both Grad & Undergrad

4. Implement technical skills and processes, often with a non-technical workforce

Audience: Both Grad & Undergrad

5. Apply problem solving and management/planning tools for effectively defining problems, feasible alternative solutions, and measurable goals in a "real world" environment Audience: Both Grad & Undergrad

6. Identify the impact of organizational and cultural influences on the planning and implementation of change Audience: Both Grad & Undergrad

7. Demonstrate ability to lead an industry-based team project integrating contemporary change management frameworks and considering organizational culture Audience: Graduate

I SY E 516 – INTRODUCTION TO DECISION ANALYSIS 3 credits.

Overview of modeling techniques and methods used in decision analysis, including multiattribute utility models, decision trees, and Bayesian models. Psychological components of decision making are discussed. Elicitation techniques for model building are emphasized. Practical applications through real world model building are described and conducted.

Requisites: (STAT/MATH 309, STAT 311, or STAT/MATH 431), graduate/ professional standing, or member of Engineering Guest Students **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Recognize the types of problems that decision analysis can and cannot solve Audience: Both Grad & Undergrad

2. Structure decision problems by identifying the relevant values, objectives, attributes, decisions, uncertainties, consequences, and trade-offs

Audience: Both Grad & Undergrad

3. Represent aspects of a decision problem graphically or mathematically Audience: Both Grad & Undergrad

4. Determine the optimal decision, using mathematical techniques as appropriate Audience: Both Grad & Undergrad

5. Identify which parameters have the most impact on the result Audience: Both Grad & Undergrad

6. Explain the results of a decision analysis to managers and other nonspecialists Audience: Both Grad & Undergrad

7. Articulate mathematical foundations of decision problems Audience: Graduate

I SY E 517 – DECISION MAKING IN HEALTH CARE

3 credits.

Introduction to the use of decision sciences in health-care. Conceptual understanding of medical decision making and its tools including decision trees, sensitivity analysis, Markow (decision) processes, and Monte Carlo simulations with examples from the current medical literature.

Requisites: (STAT/MATH 309, STAT 311, or STAT/MATH 431) and (I SY E 323 or E C E/COMP SCI/I SY E 524), or graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Explain how decision sciences are used in the health-care industry Audience: Both Grad & Undergrad

2. Describe concepts related to medical decision making and costeffectiveness analysis Audience: Both Grad & Undergrad

3. Apply technical skills in decision analysis including the creation and evaluation of decision trees, the use of sensitivity analysis, and the use of Markov processes and Monte Carlo simulation Audience: Both Grad & Undergrad

4. Incorporate specific patient preferences into medical decision models through the use of utility analysis Audience: Both Grad & Undergrad

5. Identify and apply an advanced decision analytical modeling framework to solve medical decision making problems Audience: Graduate

I SY E/COMP SCI/DS 518 – WEARABLE TECHNOLOGY 3 credits.

Gives students hands-on experience in building wearable computing platforms. Designed for students who have a background in textiles and apparel design, computer science, engineering or media arts. By the completion of the course students will have fundamental knowledge of electronic circuitry, programming, and "maker skills".

Requisites: Sophomore standing

Course Designation: Level - Intermediate L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No **Last Taught:** Fall 2022

ISY E 520 – QUALITY ASSURANCE SYSTEMS

3 credits.

Introduces engineers to applications of total quality concepts and tools to develop, implement, and maintain an effective quality assurance system in a manufacturing or service organization. Emphasis is on documentation development, team-based improvement strategies, and international quality standards.

Requisites: Junior standing and I SY E 315, or graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Describe and apply the basic elements of quality and environmental management systems, including the requirements and certification process of international standards such as ISO 9001 and ISO 14001 and industry-specific applications of these standards Audience: Both Grad & Undergrad

2. Apply concepts and tools in the development, implementation, and maintenance of effective quality and environmental management systems in manufacturing and service organizations, including various approaches for management system documentation structure Audience: Both Grad & Undergrad

3. Describe and explain strategic and competitive considerations in management system implementation and maintenance, including riskbased thinking and continual improvement Audience: Both Grad & Undergrad

4. Develop and apply auditing techniques and skills Audience: Both Grad & Undergrad

5. Demonstrate ability to synthesize and apply requirements for quality and environmental management considering organizational strategy, culture and constraints Audience: Graduate

I SY E 521 – MACHINE LEARNING IN ACTION FOR INDUSTRIAL ENGINEERS

3 credits.

Principles, algorithms, and industrial engineering applications of machine learning. Predictive analytics, with a focus on combining data and models to improve decision-making. Methods include: statistics, linear regression, logistic regression, regularization, over-fitting, clustering, classification and regression trees, boosting, bagging, deep learning, and neural networks. Applications areas include: healthcare, transportation, and the public sector.

Requisites: (COMP SCI 200, 220, or placement into COMP SCI 300), (I SY E 323 or I SY E/COMP SCI/E C E 524), and (I SY E 210, STAT 311, 324, STAT/MATH 309, or 431), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify problems amenable to machine learning and the techniques required to solve those problems (regression vs. classification, regularization, bagging vs. boosting, etc.) Audience: Both Grad & Undergrad

2. Apply appropriate analytical models to solve problems and improve decision-making using Python Audience: Both Grad & Undergrad

3. Effectively communicate findings through both oral and written formats

Audience: Both Grad & Undergrad

4. Demonstrate an understanding of how industrial engineering techniques (e.g., optimization) are used to train machine learning models Audience: Graduate

I SY E/COMP SCI/E C E 524 – INTRODUCTION TO OPTIMIZATION 3 credits.

Introduction to mathematical optimization from a modeling and solution perspective. Formulation of applications as discrete and continuous optimization problems and equilibrium models. Survey and appropriate usage of basic algorithms, data and software tools, including modeling languages and subroutine libraries.

Requisites: (COMP SCI 200, 220, 300, 301, 302, 310, or placement into COMP SCI 300) and (MATH 320, 340, 341, or 375) or graduate/ professional standing

Course Designation: Breadth - Natural Science

Level - Intermediate

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Repeatable for Credit: No Last Taught: Spring 2025

Learning Outcomes: 1. Engage in topics about "optimization in practice". Audience: Undergraduate

2. Use and analyze the results of state of the art optimization software. Audience: Undergraduate

3. Use the GAMS modeling system and Jupyter notebooks (in conjunction with elementary Python) or Julia and JUMP. Audience: Undergraduate

4. Design good models for realistic applications in engineering and the sciences. Audience: Undergraduate

5. Develop a "commercial strength" application of optimization technology. Audience: Undergraduate

I SY E/COMP SCI/MATH/STAT 525 – LINEAR OPTIMIZATION 3 credits.

Introduces optimization problems whose constraints are expressed by linear inequalities. Develops geometric and algebraic insights into the structure of the problem, with an emphasis on formal proofs. Presents the theory behind the simplex method, the main algorithm used to solve linear optimization problems. Explores duality theory and theorems of the alternatives.

Requisites: MATH 320, 340, 341, 375, or 443 or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

Course Designation: Breadth - Natural Science Level - Advanced L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement Repeatable for Credit: No

Last Taught: Spring 2025 Learning Outcomes: 1. Use linear programming to formulate real world decision problems. Audience: Both Grad & Undergrad

2. Apply algorithms to solve linear programming problems and demonstrate their correctness. Audience: Both Grad & Undergrad

 Combine different proving techniques explored in class in an original way to show new results.
Audience: Graduate

I SY E/COMP SCI 526 – ADVANCED LINEAR PROGRAMMING 3 credits.

Review of linear programming. Polynomial time methods for linear programming. Quadratic programs and linear complementarity problems and related solution techniques. Solution sets and their continuity properties. Error bounds for linear inequalities and programs. Parallel algorithms for linear and quadratic programs.

Requisites: STAT/COMP SCI/I SY E/MATH 525 and (COMP SCI 200, 220, 300, 301, 302, 310, or placement into COMP SCI 300) or graduate/ professional standing

Course Designation: Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S

Repeatable for Credit: No

Last Taught: Spring 2020

Learning Outcomes: 1. Use the theory of linear programming to prove general duality results Audience: Undergraduate

2. Apply the concept of complementarity Audience: Undergraduate

3. Analyze and develop algorithms for solving optimization and equilibrium problems Audience: Undergraduate

4. Apply decomposition methods and other advanced algorithms for the solution of optimization and equilibrium problems Audience: Undergraduate

5. Understand economic concepts and how they relate to optimization and equilibria Audience: Undergraduate

6. Extend theory of linear programming into the framework of conic programming Audience: Undergraduate

I SY E/PSYCH 549 – HUMAN FACTORS ENGINEERING

3 credits.

Analysis and design of man-machine systems using human performance models and data. Emphasis on systems involving communication and control. Projects using digital and analog computer simulation techniques for system design.

Requisites: I SY E/PSYCH 349, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Explain the topics involved in cognitive human factors and design implications of these concepts Audience: Both Grad & Undergrad

2. Describe the interactions between human operators and system components including the environment, technology, and organizations Audience: Both Grad & Undergrad

3. Discuss different human factors perspectives regarding human error and limitations of human performance, especially as these relate to memory, decision-making, action selection, and workload and stress Audience: Both Grad & Undergrad

4. Identify barriers and limitations to memory and how these must be accounted for in design of systems and displays Audience: Both Grad & Undergrad

5. Articulate the role of simulation and modeling in system design involving human operators Audience: Both Grad & Undergrad

6. Use cognitive engineering analysis methods to complete a detailed analysis of a real incident or accident including outlining each layer and component of system failure and proposing possible redesign solutions Audience: Graduate

I SY E 552 – HUMAN FACTORS ENGINEERING DESIGN AND EVALUATION

3 credits.

Evaluation, analysis, and design recommendations for improving human performance and productivity in applied settings. Collection of instrument-based and user survey data. Emphasis on ergonomics, human factors and sociotechnical systems engineering approaches and problems. Design project required.

Requisites: I SY E/PSYCH 349 and INTEREGR 397 (formerly E P D 397) or concurrent enrollment or graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2020

Learning Outcomes: 1. Apply observation and interview skills to understand customer needs and system interactions Audience: Both Grad & Undergrad

2. Translate observation and interview data into models of customer requirements and system constraints Audience: Both Grad & Undergrad

3. Communicate model content to the customer and to marketing, engineering, management, and other members of the design team Audience: Both Grad & Undergrad

4. Translate work models into aesthetically appealing and functional design concepts and prototypes Audience: Both Grad & Undergrad

5. Evaluate and iterate prototype designs into a system that satisfies customer requirements Audience: Both Grad & Undergrad

6. Design a user study to resolve a design issue, such as the choice of optin or opt-out default Audience: Graduate

I SY E 555 – HUMAN PERFORMANCE AND ACCIDENT CAUSATION 3 credits.

A systems view of accident causation, with emphasis on the human performance limitations important in industrial and other accidents. Models of causation, data collection systems, economic evaluation, and safety programs. Small group projects.

Requisites: I SY E/PSYCH 349, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Explain the rules and regulations governing accident investigations in different industries including transportation and healthcare

Audience: Both Grad & Undergrad

2. Describe the standard process for conducting an accident investigation Audience: Both Grad & Undergrad

3. Describe basic accident investigation tools, methods and techniques Audience: Both Grad & Undergrad

4. Discuss different human factors perspectives regarding the underlying causes of errors and accidents Audience: Both Grad & Undergrad

5. Identify different approaches for redesigning systems to improve safety

Audience: Both Grad & Undergrad

6. Utilize accident investigation methods and tools to analyze a major accident to determine causes and corrective actions Audience: Graduate

I SY E 557 – HUMAN FACTORS ENGINEERING FOR HEALTHCARE SYSTEMS

3 credits.

Introduction to the application of Human Factors Engineering theory and methods to the analysis and improvement of healthcare delivery systems. **Requisites:** PSYCH/I SY E 349, or graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2023

Learning Outcomes: 1. Explain Human Factors Engineering theories and methods as they pertain to the evaluation and design of healthcare sociotechnical systems Audience: Both Grad & Undergrad

2. Select and critically evaluate the utility of key Human Factors Engineering concepts and tools for assessing and modeling healthcare delivery challenges in sociotechnical systems Audience: Both Grad & Undergrad

3. Identify the impact of changes to the healthcare sociotechnical system at the individual and organizational level Audience: Both Grad & Undergrad

4. Apply a Human Factors Engineering-based sociotechnical system approach to evaluate and design interaction between users and information technologies Audience: Both Grad & Undergrad

5. Demonstrate the use of Human Factors Engineering techniques in solving healthcare delivery problems within the organizational, social, and physical contexts in information system design Audience: Both Grad & Undergrad

6. Demonstrate ability to independently evaluate Human Factors Engineering research in healthcare Audience: Graduate

I SY E/COMP SCI/M E 558 – INTRODUCTION TO COMPUTATIONAL GEOMETRY

3 credits.

Introduction to fundamental geometric computations and algorithms, and their use for solving engineering and scientific problems. Computer representations of simple geometric objects and paradigms for algorithm design. Applications from areas of engineering analysis, design and manufacturing, biology, statistics, and other sciences. **Requisites:** (COMP SCI 367 or 400) and MATH 234 or graduate/ professional standing **Course Designation:** Level - Advanced L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No **Last Taught:** Spring 2018

I SY E 562 - HUMAN FACTORS OF DATA SCIENCE AND MACHINE LEARNING

3 credits.

An examination of the "human side" of data science. Issues of bias, fairness, trust, and understandability. Unique characteristics of behavioral data, such as representative sampling, human adaptation, and grouped data. Practical skills in behavioral data analytics with a focus on important conceptual, design, and ethical issues specific to behavioral data. Survey of machine learning techniques including supervised learning, unsupervised learning, reinforcement learning, deep learning, and text analysis. Methods are contextualized through engineering case studies. Requisites: (I SY E 210, E C E 331, MATH/STAT 310, STAT 312, or 340), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No Last Taught: Spring 2025

Learning Outcomes: 1. Consider human values and behavior in developing and using machine learning models Audience: Both Grad & Undergrad

2. Apply a human-centered design process to data and algorithmintensive products Audience: Both Grad & Undergrad

3. Describe the basic elements of machine learning and their limits Audience: Both Grad & Undergrad

4. Analyze a case study of machine learning deployed by a company and discuss strengths and limits of the deployment using the concepts of the course.

Audience: Graduate

I SY E/B M E 564 - OCCUPATIONAL ERGONOMICS AND BIOMECHANICS

3 credits.

Introduces engineers how to design manufacturing and industrial operations in which people play a significant role, so that human capabilities are maximized, physical stress is minimized, and workload is optimized. Examples and topics emphasize industrial applications. Requisites: PSYCH/I SY E 349 or B M E 315, graduate/professional standing, or member of Engineering Guest Students **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Evaluate jobs, equipment, tools, products, and environments, in which people play a significant role, for health and safety hazards and the risk of injuries and illnesses Audience: Both Grad & Undergrad

2. Devise how to reduce or eliminate physical stresses and the risk of injuries and illnesses in jobs, equipment, tools, products, and environments

Audience: Both Grad & Undergrad

3. Design jobs, workspaces and products for a diverse work population, to accommodate the variability of human dimensions strength, endurance, and physical capacity to do work Audience: Both Grad & Undergrad

4. Design jobs equipment, tools, products, and environments so that human capabilities are maximized, physical stress is minimized, and workload is optimized Audience: Both Grad & Undergrad

5. Identify fundamental physiological principles and biomechanical theories that are germane to the evaluation, design and reduction or elimination of stresses and strain in jobs, equipment, tools, products, and environments

Audience: Graduate

I SY E/E C E 570 – ETHICS OF DATA FOR ENGINEERS 3 credits.

Introduction to ethical issues in data engineering and principled solutions. Algorithmic fairness (individual fairness, group fairness, counterfactual fairness), differential privacy and its applications, and robustness. **Requisites:** (I SY E 521, 562, M E/COMP SCI/E C E 532, or 539) and (E C E 331, MATH/STAT 309, STAT 311, MATH 331, or STAT/MATH 431), or graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No **Last Taught:** Spring 2025 **Learning Outcomes:** 1. Describe the importance of ethical data science/ engineering Audience: Both Grad & Undergrad

2. Identify challenges of trustworthy data use in engineering such as fairness, privacy, and robustness Audience: Both Grad & Undergrad

3. Apply the definitions of trustworthy data engineering to real-world datasets Audience: Both Grad & Undergrad

4. Analyze the data analysis pipelines and evaluate the trustworthiness of their outcomes Audience: Both Grad & Undergrad

5. Create proper data analysis pipelines with ethical considerations Audience: Both Grad & Undergrad

6. Implement cutting-edge techniques to enhance the fairness, privacy, and robustness of data analysis processes Audience: Graduate

7. Conduct independent research on emerging challenges in ethical data engineering Audience: Graduate

I SY E/N E 574 – METHODS FOR PROBABILISTIC RISK ANALYSIS OF NUCLEAR POWER PLANTS

3 credits.

Methods for risk and reliability analysis of engineered systems, particularly as applied in the nuclear power industry. Fault trees and event trees, Bayesian data analysis, probabilistic risk management. Some familiarity with nuclear plant safety systems is helpful, but not required.

Requisites: (STAT/MATH 309, STAT 311, 224, 324, or STAT/MATH 431), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Correctly apply methods of fault tree, event-tree, data, and uncertainty analysis to evaluate potential risks of engineering systems

Audience: Both Grad & Undergrad

2. Recognize, formulate, and analyze risks of engineered systems Audience: Both Grad & Undergrad

3. Explain the results of risk analysis to managers and other non-specialist decision-makers Audience: Graduate

I SY E 575 – INTRODUCTION TO QUALITY ENGINEERING

3 credits.

Introduction to statistically based quality improvement methods useful in industrial settings; observational methods and design of experiments; experimentation to discover influential factors and to analyze sources of variation; robust products.

Requisites: (I SY E 210, MATH/STAT 310, STAT 312 or concurrent enrollment), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Summer 2024

Learning Outcomes: 1. Design experiments for various phases of engineering work, including new product design and development, process development, manufacturing process improvement, and health systems design and improvement

Audience: Both Grad & Undergrad

2. Analyze the results of experiments conducted at different phases of engineering work Audience: Both Grad & Undergrad

3. Apply data analysis skills in statistical methodologies, graphical displays, and visual and inferential interpretations Audience: Both Grad & Undergrad

4. Work effectively in an experiential project focused on applying appropriate statistical tools and techniques Audience: Both Grad & Undergrad

5. Explain the eight phases of Six Sigma and apply these steps to a wide range of actual situations Audience: Both Grad & Undergrad

6. Demonstrate ability to synthesize applications of statistical methodologies via analysis of current literature and case studies Audience: Graduate

I SY E 601 – SPECIAL TOPICS IN INDUSTRIAL ENGINEERING 1-3 credits.

In various areas. Sample topics: "Simulation" and "Systems Design". **Requisites:** None

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Fall 2020

I SY E 602 – SPECIAL TOPICS IN HUMAN FACTORS 3 credits.

Various special topics in human factors engineering. Course topic may vary from semester to semester. Different versions of this course may be offered in same semester.

Requisites: None

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify and describe key theories, concepts, and methods in human factors engineering Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in human factors engineering, using appropriate tools, processes, and/or software Audience: Both Grad & Undergrad

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in human factors engineering Audience: Graduate

I SY E 603 – SPECIAL TOPICS IN ENGINEERING ANALYTICS AND OPERATIONS RESEARCH

1-3 credits.

Various special topics in engineering analytics and operations research, such as machine learning, data management and analysis, optimization, etc.

Requisites: None

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify and describe key theories, concepts, and methods in engineering analytics and operations research Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in engineering analytics and operations research, using appropriate tools, processes, and/or software Audience: Both Grad & Undergrad

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in engineering analytics and operations research Audience: Graduate

I SY E 604 – SPECIAL TOPICS IN MANUFACTURING AND SUPPLY CHAIN MANAGEMENT

1-3 credits.

Various special topics in manufacturing systems and supply chain management, such as digital manufacturing technologies, Internet of Things (IoT), supply chain, etc.

Requisites: None

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify and describe key theories, concepts, and methods in manufacturing and supply chain management Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in manufacturing and supply chain management, using appropriate tools, processes, and/or software Audience: Both Grad & Undergrad

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in manufacturing and supply chain management Audience: Graduate

I SY E 605 – COMPUTER INTEGRATED MANUFACTURING 3 credits.

3 credits.

An introduction to computer-integrated design and manufacturing with a focus on manufacturing process planning. Emphasis on concurrent engineering principles, manufacturing process engineering, computeraided process planning, NC programming, and CAM integration. Course provides experience with CAM software and NC machines.

Requisites: I SY E 315, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2024

Learning Outcomes: 1. Identify and formulate manufacturing process and system level problems by applying principles of engineering and mathematics

Audience: Both Grad & Undergrad

2. Design the geometry of a mechanical component and develop computer code needed to fabricate the component Audience: Both Grad & Undergrad

3. Apply principles of engineering and mathematics to solve process- and system-level problems such as setting process parameters and evaluating the system performance Audience: Both Grad & Undergrad

4. Demonstrate ability to combine different modeling and analysis methods explored in the class for manufacturing processes and systems to achieve strategies for performance improvement Audience: Graduate

I SY E 606 – SPECIAL TOPICS IN HEALTHCARE SYSTEMS ENGINEERING

1-3 credits.

Various special topics in healthcare systems engineering, such as human factors in healthcare settings, operations research applied to healthcare, etc.

Requisites: None

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Learning Outcomes:** 1. Identify and describe key theories, concepts, and methods in healthcare systems engineering Audience: Both Grad & Undergrad

2. Apply key theories, concepts, and methods in healthcare systems engineering, using appropriate tools, processes, and/or software Audience: Both Grad & Undergrad

3. Apply, analyze, or evaluate advanced theories, concepts, or methods in healthcare systems engineering Audience: Graduate

I SY E/PHARMACY 608 – SAFETY AND QUALITY IN THE MEDICATION USE SYSTEM

3 credits.

Addresses the problems of medication errors and quality in health care, problem resolutions, methods of assessment, and intervention implementation and quality management.

Requisites: Declared in Doctor of Pharmacy program with third year standing

Repeatable for Credit: No **Last Taught:** Fall 2024

Learning Outcomes: 1. Recognize types, sources, and contributors to error within the medication use system.

Audience: Undergraduate

2. Explain the influence of work systems and human factors on the development of safe processes for improving safety within the medication use system.

Audience: Undergraduate

3. Apply tools for identifying, analyzing, and anticipating errors within the medication use system (e.g., error reporting systems, root cause analysis, failure modes and effects analysis) and use these to develop safer processes.

Audience: Undergraduate

4. Describe characteristics of healthcare settings that contribute to improved quality and how pharmacists can influence the characteristics. Audience: Undergraduate

5. Explain how quality indicators are developed, measured, and monitored in the US healthcare system. Audience: Undergraduate

6. Describe and apply economic evaluation and pharmacoeconomic principles to evaluate pharmacy programs and drug products. Audience: Undergraduate

I SY E 612 – INFORMATION SENSING AND ANALYSIS FOR MANUFACTURING PROCESSES

3 credits.

Focuses on the sensing and multivariate data modeling and analysis techniques for monitoring, diagnosis, and quality improvement of manufacturing processes. The techniques introduced can find wide applications in health care, financial engineering, service industry applications, human factors, etc.

Requisites: I SY E/M E 512, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Perform data analysis and propose quality improvement plans Audience: Both Grad & Undergrad

2. Develop, implement, and interpret advanced control charts for monitoring continuous and discrete quality characteristics and multivariate systems Audience: Both Grad & Undergrad

3. Implement appropriate data reduction and data processing methods in statistical process control Audience: Both Grad & Undergrad

4. Apply methods and tools to a real problem-solving experience via a course project Audience: Graduate

I SY E 615 – PRODUCTION SYSTEMS CONTROL 3 credits.

An intermediate to advanced course stressing the application of recent operations research techniques to production planning, scheduling and inventory control.

Requisites: I SY E 315, 320, and 323 and (STAT/MATH 310, STAT 312 or STAT/MATH 431), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply knowledge of math, science, and engineering principles to solve manufacturing, service, business, or societal operations problems Audience: Both Grad & Undergrad

2. Identify, formulate, and solve manufacturing and service operations problems using appropriate data and analytics approaches Audience: Both Grad & Undergrad

3. Identify opportunities and apply engineering solutions for system productivity and quality improvement Audience: Both Grad & Undergrad

4. Apply the techniques, skills, and tools for engineering practice, such as modeling, design, simulation, and management Audience: Both Grad & Undergrad

5. Apply advanced skills and tools for analysis, control and optimization of manufacturing and service systems operations Audience: Graduate

I SY E/B M I 617 – HEALTH INFORMATION SYSTEMS

3 credits.

Provides grounding in core concepts of health information systems. Major applications include clinical information systems, language and standards, decision support, image technology and digital libraries. Evaluation of IE tools and perspectives designed to improve the quality, efficiency and effectiveness of health information.

Requisites: I SY E 417, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Level - Advanced L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement Repeatable for Credit: No Last Taught: Spring 2016

I SY E 618 – QUALITY ENGINEERING AND QUALITY MANAGEMENT

3 credits.

Strategic quality planning, change management, problem identification and solving, process improvement, and performance evaluation. Business and decision-making skills related to quality systems and process improvement.

Requisites: Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Work effectively on a team-based experiential project focused on process design, analysis, and resource management and integrating the concepts of continual improvement, customer focus, and teamwork

Audience: Graduate

2. Apply problem solving and management/planning tools for effectively defining problems, feasible alternative solutions, and measurable goals in a real-world environment Audience: Graduate

3. Demonstrate ability to lead an industry-based team project integrating contemporary change management frameworks and considering organizational culture Audience: Graduate

4. Apply the basics of Factorial Design of Experiments (DOE) as a statistical tool for continuous process improvement Audience: Graduate

I SY E 620 - SIMULATION MODELING AND ANALYSIS

3 credits.

Introduction to simulation modeling and analysis techniques with application to production, logistics, service, and other systems. Emphasis on model building, application of basic statistical data analysis, and the use of simulation for design, evaluation, and improvement of such systems. Introduction to available software. Case studies.

Requisites: (COMP SCI 200, 220, 300, 301, 302, or placement into COMP SCI 300) and (STAT 224, 312, 324, or STAT/MATH 310), graduate/ professional standing, or member of Engineering Guest Students **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2023

Learning Outcomes: 1. Identify the major capabilities and limitations of discrete-event simulation for modeling types of systems that industrial engineers commonly encounter Audience: Both Grad & Undergrad

2. Model and run discrete-event simulation in practical situations Audience: Both Grad & Undergrad

3. Identify the main assumptions underlying simulation models, and what can happen when these assumptions do not hold Audience: Both Grad & Undergrad

4. Apply the results of the modeling process to management and other non-specialist users of engineering analyses Audience: Both Grad & Undergrad

5. Apply experimental design or data analytics for systems comparison and output analysis of the simulation models Audience: Both Grad & Undergrad

6. Apply simulation input/output techniques to model complicated stochastic systems such as manufacturing production systems and health care systems Audience: Graduate

I SY E 624 – STOCHASTIC MODELING TECHNIQUES 3 credits.

Techniques for modeling systems in which uncertainty is an essential factor. Emphasizes why, how and when techniques can or cannot be applied, rather than their mathematical derivation. Case studies and/or examples from such areas as logistics, production, and service industries. **Requisites:** (STAT/MATH 309, 311, or STAT/MATH 431) and (MATH 320, 340, 341, or 375), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Identify and interpret basic concepts of probability, including random variables, and conditional probability, expectation, and variance Audience: Both Grad & Undergrad

2. Analyze probability models such as the Markov chains, the exponential distribution, Poisson processes, and queuing models Audience: Both Grad & Undergrad

3. Identify, formulate, and develop solution techniques for problems that can be modeled by stochastic models in various domains (engineering, computer science, supply chains, healthcare systems, operations research)

Audience: Both Grad & Undergrad

4. Recognize how and when to apply each type of probability model Audience: Both Grad & Undergrad

5. Formulate mathematical formulations and apply proof techniques Audience: Graduate

I SY E 625 – LOGISTICS SYSTEMS DESIGN 3 credits.

Practical methods for the planning, design and evaluation of complex logistics and distribution systems. Modeling techniques and solution approaches that reduce cumbersome details of logistics systems into models with a manageable number of parameters and decision variables. It shows how the solutions to these models are interpreted into optimal rules that guide the operation, design or planning process. Practical methods for the planning, design and evaluation of complex logistics and distribution systems. Modeling techniques and solution approaches that reduce cumbersome details of logistics systems into models with a manageable number of parameters and decision variables. It shows how the solutions to these models are interpreted into optimal rules that guide the operation, design or planning process. Builds on knowledge of introductory programming such as Python, Matlab, or R.

Requisites: (I SY E 323 or E C E/COMP SCI/I SY E 524) and (I SY E 210, E C E 331, MATH/STAT 310, STAT 312, 324, or 340), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Learning Outcomes: 1. Identify decision problems for typical logistics systems

Audience: Both Grad & Undergrad

2. Establish optimization models for typical logistics systems Audience: Both Grad & Undergrad

3. Use multiple methods to solve logistics system models Audience: Both Grad & Undergrad

4. Explain the insights of solutions and apply them in realistic situations Audience: Graduate

I SY E/MATH/OTM/STAT 632 – INTRODUCTION TO STOCHASTIC PROCESSES

3 credits.

Topics include discrete-time Markov chains, Poisson point processes, continuous-time Markov chains, and renewal processes. Applications to queueing, branching, and other models in science, engineering and business.

Requisites: (STAT/MATH 431, 309, STAT 311 or MATH 531) and (MATH 320, 340, 341, 375, 421 or 531) or graduate/professional standing or member of the Pre-Masters Mathematics (Visiting International) Program

Course Designation: Breadth - Natural Science Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Recall and state the formal definitions of the mathematical objects and their properties for stochastic processes (e.g., discrete space Markov chains, Poisson processes, renewal processes, branching processes, etc.). Audience: Both Grad & Undergrad

2. Use such definitions to argue that a mathematical object does or does not have the condition of being a particular type or having a particular property (e.g., irreducibility, aperiodicity, recurrence, transience, the Markov property, etc.).

Audience: Both Grad & Undergrad

3. Recall and state the standard theorems of stochastic processes. (e.g., laws of large numbers for Markov chains, existence of limiting/stationary distributions, law of large numbers for renewal processes, etc.) and recall the arguments for these theorems and the underlying logic of their proofs.

Audience: Both Grad & Undergrad

4. Construct mathematical arguments related to the above definitions, properties, and theorems, including the construction of examples and counterexamples. Audience: Both Grad & Undergrad

5. Convey arguments in oral and written forms using English and appropriate mathematical terminology, notation and grammar. Audience: Both Grad & Undergrad

6. Model simple real life situations by means of discrete-space stochastic processes and calculate probabilities associated with those processes. Audience: Both Grad & Undergrad

7. Identify applications of course content in current areas of research. Audience: Graduate

I SY E/M E 641 – DESIGN AND ANALYSIS OF MANUFACTURING SYSTEMS

3 credits.

Covers a broad range of techniques and tools relevant to the design, analysis, development, implementation, operation and control of modern manufacturing systems. Case studies assignments using industry data will be used to elaborate the practical applications of the theoretical concepts. **Requisites:** I SY E 315, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No

Last Taught: Spring 2025

Learning Outcomes: 1. Identify suitable analysis techniques to investigate processes related to manufacturing, planning, engineering or office operations within a manufacturing firm Audience: Both Grad & Undergrad

2. Perform analysis to describe, predict and analyze behavior of a manufacturing system to meet desired managerial and economic objectives for a real-world or realistic manufacturing systems improvement project/case study Audience: Both Grad & Undergrad

3. Develop recommendations that will improve manufacturing system performance (e.g. reduce flow time, increase throughput) Audience: Both Grad & Undergrad

4. Collaborate effectively in teams to develop solutions to engineering problems and communicate findings effectively Audience: Both Grad & Undergrad

5. Reflect on personal strengths and weaknesses with respect to team leadership and project management Audience: Graduate

I SY E/M E 643 – PERFORMANCE ANALYSIS OF MANUFACTURING SYSTEMS

3 credits.

Examines the state of the art in the use of stochastic network theory to develop performance models of modern manufacturing systems. **Requisites:** (I SY E 624 or STAT/I SY E/MATH/OTM 632) and (COMP SCI 200, 220, 300, 301, 302, 400, or placement into COMP SCI 300), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2021

Learning Outcomes: 1. Model a variety of manufacturing problems as stochastic models using Markov Chain and Process theory Audience: Both Grad & Undergrad

2. Identify the basic assumptions underlying stochastic models and understand what can happen when these assumptions do not hold Audience: Both Grad & Undergrad

3. Apply queueing theory to model manufacturing systems Audience: Both Grad & Undergrad

4. Apply the line balancing method for assembly systems design Audience: Both Grad & Undergrad

5. Perform cost analysis for manufacturing systems Audience: Both Grad & Undergrad

6. Apply the analytical approaches of performance analysis for manufacturing systems to real industry cases Audience: Both Grad & Undergrad

7. Apply advanced Markov process method to solve complicated performance evaluation problems encountered in manufacturing production systems Audience: Graduate

I SY E 645 – ENGINEERING MODELS FOR SUPPLY CHAINS 3 credits.

Provides an overview of engineering fundamentals behind supply chains. Topics covered will include modeling and design of multi-stage production distribution systems, multi-echelon inventory models, theory of supply chain contracts, value of flexibility and information sharing in supply chains.

Requisites: I SY E 323 and I SY E 415, or graduate/professional standing, or member of Engineering Guest Students

Repeatable for Credit: No

Last Taught: Fall 2023

Learning Outcomes: 1. Apply multiple forecasting methods for customer demand

Audience: Undergraduate

2. Identify and apply multiple inventory management models Audience: Undergraduate

3. Identify the limitation of models and tune them for realistic cases Audience: Undergraduate

4. Create and present reports for realistic inventory management policy Audience: Undergraduate

5. Demonstrate ability to lead a team project to optimize realistic supply chain decisions with analytical tools and numerical simulation Audience: Undergraduate

I SY E 649 – INTERACTIVE DATA ANALYTICS

3 credits.

A cognitive engineering approach to human-computer interaction and data visualization in particular. Includes a four-part description of effective visualization: design intent, data and application domain, representation and interface features, and human limits and capabilities. The philosophical perspective, scientific basis, and practical tools for effective data visualization and visual analytics. Data processing and how to create static graphs as well as web-based interactive visualizations using the statistical language R.

Requisites: I SY E/PSYCH 349 and (I SY E 210, E C E 331, MATH/ STAT 310, STAT 312, 324, or 340), graduate/professional standing, or member of Engineering Guest Students

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2024

Learning Outcomes: 1. Approach visualization as a design process, using the critical response process and paper prototypes Audience: Both Grad & Undergrad

2. Design visualizations for different audiences and different purposes Audience: Both Grad & Undergrad

3. Use the concepts of abstraction and aggregation to translate raw data into meaningful information Audience: Both Grad & Undergrad

4. Use the flexibility of the grammar of graphics to craft graphs for effective communication Audience: Both Grad & Undergrad

5. Develop replicable data analyses and visualizations with R and RShiny Audience: Both Grad & Undergrad

6. Create specialized data analytic visualizations such as time series decompositions and ROC curves Audience: Graduate

I SY E/PSYCH 653 – ORGANIZATION AND JOB DESIGN

3 credits.

Design of productive organizations and people's roles within them. Issues including boundary location, organizational decision levels, autonomous work groups, implementation and diffusion. Roles of the union. Case studies.

Requisites: I SY E/PSYCH 349, graduate/professional standing, or member of Engineering Guest Students

Course Designation: Level - Advanced

L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2021

Learning Outcomes: 1. Apply the work system model Audience: Both Grad & Undergrad

2. Apply a variety of models and theories of job and organization design to answer questions such as, "What makes for a good job?" and "What makes for a bad job?" Audience: Both Grad & Undergrad

3. Apply interview and survey methods for analyzing jobs Audience: Both Grad & Undergrad

4. Identify approaches to implement job redesign Audience: Both Grad & Undergrad

5. Identify societal trends related to job design Audience: Both Grad & Undergrad

6. Identify similarities and differences between various models and theories of job and organization design Audience: Graduate

I SY E/B M E 662 – DESIGN AND HUMAN DISABILITY AND AGING 3 credits.

Design of products for persons with physical, sensory or cognitive impairments is covered as well as the design of standard mass market products. Interdisciplinary teams explore specific disabilities, then design a standard mass market product in competition with each other.

Requisites: Junior standing or member of Engineering Guest Students **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Explain the access and usability issues that users with physical, sensory, or cognitive impairments due to age or permanent or temporary disability might experience when interacting with everyday products and environmental designs Audience: Both Grad & Undergrad

2. Apply human factors principles of universal design to describe redesign solutions for common products and environmental designs to improve accessibility for all users Audience: Both Grad & Undergrad

3. Identify barriers to access for users based on specific disabilities Audience: Both Grad & Undergrad

4. Articulate common misconceptions and biases related to users with disabilities and use various data sources to discuss the reality of designing for users with disabilities or impairments Audience: Both Grad & Undergrad

5. Identify usability issues for mass-market products and environmental designs using universal design and basic access principles Audience: Both Grad & Undergrad

6. Propose methods for improving accessibility and usability using universal design and basic access principles Audience: Both Grad & Undergrad

7. Articulate how social, institutional, and organizational structures and insufficiently designed systems and environments disadvantage various user groups, with special focus on aging and disabled users Audience: Graduate

I SY E 699 – ADVANCED INDEPENDENT STUDY

1-5 credits.

Under faculty supervision. **Requisites:** Consent of instructor **Course Designation:** Level - Advanced L&S Credit - Counts as Liberal Arts and Science credit in L&S Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Spring 2025 **Learning Outcomes:** 1. Conduct and report on graduate-level industrial engineering research Audience: Graduate

2. Independently develop industrial engineering research questions Audience: Graduate

3. Appropriately utilize online and library resources Audience: Graduate

I SY E 702 – GRADUATE COOPERATIVE EDUCATION PROGRAM 1-2 credits.

Work experience that combines classroom theory with practical knowledge of operations to provide students with a background on which to develop and enhance a professional career. The work experience is tailored for MS students from within the U.S. as well as eligible international students. **Requisites:** Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Identify and respond appropriately to real-life engineering ethics cases relevant to co-op work Audience: Graduate

2. Synthesize and apply appropriate technical education to real world technical work Audience: Graduate

3. Communicate effectively in writing and speaking with a range of audiences in the workplace, including those without disciplinary expertise Audience: Graduate

4. Develop professional and transferable habits like time management skills, collaborative problem-solving skills, and research skills for learning new information Audience: Graduate

I SY E/POP HLTH 703 – QUALITY OF HEALTH CARE: EVALUATION AND ASSURANCE

1-3 credits.

Implementation, oversight, and management of quality-oriented activities in health care settings. Overview of current and historical activities, approaches, and issues confronting health care related to quality assessment, assurance, and improvement.

Requisites: Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2018

Learning Outcomes: 1. Understand and communicate the conceptualization and measurement of quality of healthcare and patient safety.

Audience: Graduate

2. Illustrate basic concepts and methods in quality improvement as applied to current issues in healthcare. Audience: Graduate

3. Demonstrate an understanding of the diverse perspectives that can be used to address quality and safety issues in different healthcare organizations. Audience: Graduate

I SY E/C&E SOC/N E/SOC 708 – SOCIETAL RISK MANAGEMENT OF TECHNOLOGICAL HAZARDS

3 credits.

Issues involved in decision-making regarding technological risks and risk management in areas such as nuclear power, hazardous waste disposal, and pollution control. Risk perception and cognitive biases; risk analysis and decision analysis; political issues in risk management; regulatory mechanisms; and risk communication. Selected case studies. **Requisites:** Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement Repeatable for Credit: No Last Taught: Spring 2020

I SY E/COMP SCI 719 – STOCHASTIC PROGRAMMING

3 credits.

Stochastic programming is concerned with decision making in the presence of uncertainty, where the eventual outcome depends on a future random event. Topics include modeling uncertainty in optimization problems, risk measures, stochastic programming algorithms, approximation and sampling methods, and applications. Students are strongly encouraged to have knowledge of linear programming (e.g., MATH/COMP SCI/I SY E/STAT 525) and probability and statistics (e.g., MATH/STAT 431). Knowledge of integer optimization (MATH/COMP SCI/ I SY E 728) is helpful, but not required. Requisites: Graduate/professional standing Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit: No** Last Taught: Spring 2025 Learning Outcomes: 1. Learn the terms, basic capabilities, and limitations of stochastic programming models Audience: Graduate

2. Formulate stochastic programming models Audience: Graduate

3. Implement the algorithms used to solve stochastic programming problems Audience: Graduate

4. Learn principles of decomposition algorithms for solving large-scale optimization problems Audience: Graduate

I SY E/INFO SYS 722 – COMPUTER-BASED DATA MANAGEMENT 3 credits.

Use, control and administration of centralized and distributed data bases. Topics include the definition, design, creation, revision, interrogation, update, security and integrity of data bases.

Requisites: Graduate/professional standing and INFO SYS 371 **Course Designation:** Grad 50% - Counts toward 50% graduate

coursework requirement Repeatable for Credit: No Last Taught: Fall 2020

I SY E/COMP SCI 723 – DYNAMIC PROGRAMMING AND ASSOCIATED TOPICS

3 credits.

General and special techniques of dynamic programming developed by means of examples. Shortest-path algorithms. Deterministic equipment replacement models. Resource allocation problem. Traveling-salesman problem. Knapsack problem. Analysis of inventory systems. General stochastic formulations. Markovian decision processes. Students are strongly encouraged to have knowledge of mathematical optimization (e.g., COMP SCI/I SY E/MATH/STAT 525, I SY E 623, COMP SCI/I SY E/ MATH/STAT 726), knowledge of analysis (e.g., MATH/STAT 431 or 521) and programming ability (e.g., COMP SCI 200 or 301) Requisites: Graduate/professional standing Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement Repeatable for Credit: No Last Taught: Fall 2024 Learning Outcomes: 1. Identify basic components, such as the state space, of a dynamic program Audience: Graduate

2. Formulate and solve dynamic programs under different performance criteria such as finite horizon discounted reward/cost criteria Audience: Graduate

3. Apply dynamic programming tools and concepts in `traditional' industrial engineering applications such as supply chain, manufacturing, and healthcare Audience: Graduate

I SY E/COMP SCI/MATH/STAT 726 – NONLINEAR OPTIMIZATION I 3 credits.

Theory and algorithms for nonlinear optimization, focusing on unconstrained optimization. Line-search and trust-region methods; quasi-Newton methods; conjugate-gradient and limited-memory methods for large-scale problems; derivative-free optimization; algorithms for leastsquares problems and nonlinear equations; gradient projection algorithms for bound-constrained problems; and simple penalty methods for nonlinearly constrained optimization. Students are strongly encouraged to have knowledge of linear algebra and familiarity with basic mathematical analysis.

Requisites: Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

I SY E/COMP SCI 727 – CONVEX ANALYSIS 3 credits.

Convex sets in finite-dimensional spaces: relative interiors, separation, set operations. Convex functions: conjugacy, subdifferentials and directional derivations, functional operations, Fenchel-Rockafellar duality. Applications to operations research and related areas. Students taking this course are strongly encouraged to have had a course in basic analysis (e.g. MATH 521) and a course in linear algebra (e.g., MATH 340). **Requisites:** Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate

course Designation. Grad 30% - Courts toward 30% graduate coursework requirement Repeatable for Credit: No Last Taught: Spring 2025

I SY E/COMP SCI/MATH 728 – INTEGER OPTIMIZATION 3 credits.

Introduces optimization problems over integers, and surveys the theory behind the algorithms used in state-of-the-art methods for solving such problems. Special attention is given to the polyhedral formulations of these problems, and to their algebraic and geometric properties. Applicability of Integer Optimization is highlighted with applications in combinatorial optimization. Key topics include: formulations, relaxations, polyhedral theory, cutting planes, decomposition, enumeration. Students are strongly encouraged to have knowledge of Linear Programming (e.g., MATH/COMP SCI/I SY E/STAT 525), including algorithms, duality and polyhedral theory.

Requisites: Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Describe and explain the basics of polyhedral theory, which consists in the study of systems of linear inequalities both from an algebraic and a geometric point of view Audience: Graduate

2. Define perfect formulations and identify what properties are desirable in an integer programming formulation of a problem Audience: Graduate

3. Explain how valid inequalities can be used as cutting planes to strengthen integer programming formulations Audience: Graduate

I SY E/M H R 729 – BEHAVIORAL ANALYSIS OF MANAGEMENT DECISION MAKING

3 credits.

Examination of behavioral science literature dealing with the processes by which individuals, small groups and organizations make decisions. Understanding decision-making behavior in order to improve managerial performance; modeling decision-making processes for systems design and theory building purposes. Knowledge of statistics strongly encouraged such as STAT 301.

Requisites: Graduate/professional standing or declared in graduate Business Exchange program

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Fall 2022

I SY E/COMP SCI/MATH 730 – NONLINEAR OPTIMIZATION II 3 credits.

Theory and algorithms for nonlinearly constrained optimization. Relevant geometric concepts, including tangent and normal cones, theorems of the alternative, and separation results. Constraint qualifications. Geometric and algebraic expression of first-order optimality conditions. Second-order optimality conditions. Duality. Nonlinear programming algorithms: merit functions and filters; interior-point, augmented Lagrangian, and sequential quadratic programming algorithms.

Requisites: STAT/COMP SCI/I SY E/MATH 726

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No

Last Taught: Fall 2022

I SY E 790 - MASTER'S RESEARCH AND THESIS

1-9 credits.

Directed Master's-level research projects as arranged with instructor. **Requisites:** Graduate/professional standing

Course Designation: Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

Learning Outcomes: 1. Demonstrate an ability to formulate, analyze, and independently solve advanced industrial engineering problems Audience: Graduate

2. Communicate research results in writing and/or technical presentations Audience: Graduate

I SY E 823 – SPECIAL TOPICS IN OPERATIONS RESEARCH 1-3 credits.

Subjects vary. **Requisites:** Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Spring 2021

Learning Outcomes: 1. Apply advanced operations research tools to solve a variety of industrial engineering problems Audience: Graduate

2. Analyze rigorously the methods used in operations research Audience: Graduate

I SY E/PSYCH 854 – SPECIAL TOPICS IN ORGANIZATION DESIGN 1-3 credits.

Requisites: Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Fall 2020

Learning Outcomes: 1. Apply advanced organizational design tools to solve a variety of industrial engineering problems Audience: Graduate

2. Analyze rigorously the methods used in organizational design Audience: Graduate

I SY E/PSYCH 859 – SPECIAL TOPICS IN HUMAN FACTORS ENGINEERING

1-3 credits.

Requisites: Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: Yes, unlimited number of completions **Last Taught:** Spring 2025

I SY E/POP HLTH 875 – COST EFFECTIVENESS ANALYSIS IN HEALTH AND HEALTHCARE

3 credits.

Basic ideas and tools of cost effectiveness analysis as applied in evaluating medical technologies. Addresses special problems and methods in assessing diagnostic technologies, including ROC analysis, and in measuring health for technology assessment. Uses "classical" and current journal literature.

Requisites: SOC/POP HLTH 797 and POP HLTH/B M I 552 **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement

Repeatable for Credit: No

Last Taught: Spring 2025

Learning Outcomes: 1. Apply basic concepts of economic analysis to the assessment of medical technologies and healthcare interventions more broadly

Audience: Graduate

2. Examine health outcomes on a range from objective measures of physical systems to subjective preference-based measures of health utility and describe the benefits and limitations of using quality-adjusted life years (QALYs) as a health outcome measure Audience: Graduate

3. Explain why we seek to obtain estimates of the "opportunity cost" of using health care resources, describe the process of "costing" in economic assessments of medical technologies and identify useful sources of information for obtaining cost information (and their limitations) Audience: Graduate

4. Describe how primary data from randomized controlled trials and observational studies can be designed to assess medical technologies and explain the advantages and disadvantages of different designs in terms of their internal and external validity and decision-relevance Audience: Graduate

5. Describe how evidence from secondary data can be integrated using meta-analysis and decision-analytic modeling methods to assess medical technologies and demonstrate basic ability to design and execute simple decision tree and Markov models for cost-effectiveness analysis Audience: Graduate

I SY E 890 – PRE-DISSERTATOR'S RESEARCH 1-9 credits.

Directed PhD-level research projects as arranged with faculty advisor. **Requisites:** Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Spring 2025 **Learning Outcomes:** 1. Demonstrate an ability to formulate, analyze, and independently solve advanced industrial engineering problems

Audience: Graduate

2. Communicate research results in writing and/or technical presentations Audience: Graduate

I SY E 961 – GRADUATE SEMINAR IN INDUSTRIAL ENGINEERING

1-3 credits.

Topics vary. **Requisites:** Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Spring 2025 **Learning Outcomes:** 1. Identify and describe modern challenges in industrial engineering Audience: Graduate

I SY E 990 - RESEARCH AND THESIS

1-6 credits.

Directed PhD-level research projects as arranged with faculty advisor. **Requisites:** Graduate/professional standing **Course Designation:** Grad 50% - Counts toward 50% graduate coursework requirement **Repeatable for Credit:** No **Last Taught:** Spring 2025 **Learning Outcomes:** 1. Demonstrate an ability to formulate, analyze, and independently solve advanced industrial engineering problems Audience: Graduate

2. Communicate research results in writing and/or technical presentations Audience: Graduate

I SY E 999 – ADVANCED INDEPENDENT STUDY

1-6 credits.

Under faculty supervision. **Requisites:** Consent of instructor **Course Designation:** Grad 50% – Counts toward 50% graduate coursework requirement **Repeatable for Credit:** Yes, unlimited number of completions **Last Taught:** Fall 2022 **Learning Outcomes:** 1. Conduct and report on graduate-level industrial engineering research Audience: Graduate

2. Independently develop industrial engineering research questions Audience: Graduate

3. Appropriately utilize online and library resources Audience: Graduate
