LIS 350 — HISTORY AND FUTURE OF BOOKS
3 credits.

This course is framed by a question about what books are, what books have been, and what books might be: past, present, and future. The course also assumes that "book" is a capacious term, or a placeholder one, for an object that becomes the site of questions and debates about a variety of media, expressions, and recording practices. We live in a moment of rapid media evolution, and yet we have seen the book endure and change as a form. Academic fields including book history, digital humanities, media studies, and human computer interaction (to name only a few) all have something at stake in the form of the book - not to mention industry-oriented interests in e-readers, book retail, publishing - and likewise this course will approach the book from a number of perspectives. Our primary goal is to understand the book (and, in a wider sense, information) as an active technology that shapes peoples, perceptions, and cultures rather than serving as a passive receptacle of them. This course also meets the requirements for Comm B, which means we will be thinking about our own written and spoken productions by way of this material. Includes hands on research exercises in UW special collections library and Wisconsin Historical Society archive collections.

Ours has become a data society. Like at no other time, our world—the natural world, from storm systems to diseases; governments and companies; and our conversations with friends and relatives, even our movements—is recorded in digital format. A few years ago, Google CEO Eric Schmidt famously stated that “There was 5 exabytes of information created between the dawn of civilization through 2003, but that much information is now created every 2 days, and the pace is increasing.” (An exabyte is 1 trillion megabytes.) The result is that professional communicators in journalism and mass communication, as well as researchers and private firms, now literally have more data than they know what to do with. There is tremendous need across our society for people who are able to use data to investigate important questions, draw useful insights from those data, and communicate those insights to others—and also to be realistic and honest about what data can and cannot do. That is what this class is for: it is an introduction to the world of data, how data can be used to answer questions and those answers can be effectively and ethically communicated. More specifically, we will offer a combination of conceptual training, instruction in specific tools for data analysis and visualization, and the opportunity to put new skills to use in a final project. This course is intended for Juniors, Seniors and Graduate students and by instructor permission. Research methods experience preferred.
