SCHOOL PSYCHOLOGY, M.S.

LEARNING OUTCOMES

- 1. Demonstrate/show a strong foundation in current and past theories, research findings, and methodologies in school psychology.
- Know/discuss/describe the implications of human diversity (in terms of individual abilities and orientations and sociocultural backgrounds) for research and practice in school psychology and related fields.
- Learn the fundamentals of research design, data collection, and data analysis, relevant to school psychology and related fields, through participating in ongoing research or conducting their own research project(s).
- Identify key features of high-quality research or program implementation/evaluation.
- 5. Effectively communicate, both orally and in writing, results of scientific research to academic, professional/practitioner, and lay audiences.
- Conduct research or program implementation/evaluation in accordance with ethical standards established in school psychology and related fields.
