PHYSICS, M.S.

DEPARTMENT OVERVIEW

The Department of Physics has a strong tradition of graduate study and research in astrophysics; atomic, molecular, and optical physics; condensed matter physics; high energy and particle physics; plasma physics; quantum computing; and string theory. There are many facilities for carrying out world-class research (https://www.physics.wisc.edu/research/areas). We have a large professional staff: 45 full-time faculty (https://www.physics.wisc.edu/people/staff) members; 11 faculty members holding joint appointments with other departments; 34 assistant, associate, and senior scientists; and 46 postdocs.

The department occupies all of Chamberlin Hall and a portion of Sterling Hall, located in the central campus area. The Physics Library (http://physics.library.wisc.edu), (https://www.library.wisc.edu/physics) in Chamberlin Hall, is large and convenient to use. It has complete electronic access to databases and, of course, copy machines and comfortable chairs. The department maintains a fine instrument and machine shop and an electronics shop (http://uw.physics.wisc.edu/~eshop) staffed by skilled electronics technicians. There is, in addition, a student-staff machine shop open to graduate students and supervised by an experienced machinist who assists and instructs shop users. Several computers are available for general computing, and a number of smaller machines are used for on-line control of experiments and for data collection. The Division of Information Technology (DoIT) (http://www.doit.wisc.edu) has a large professional staff which assists users, provides contract programming services and offers a wide variety of computing courses. Researchers have free access to large scientific computing resources (http://aci.wisc.edu/services/large-scale). Many research programs in physics use the Physical Sciences Laboratory (PSL) (http://www.psl.wisc.edu).

M.S. DEGREE DETAILS

The department offers the master of arts and master of science degrees in physics, and the doctor of philosophy degree with a major in physics.

The master of science degree is a professional program that requires the completion of a directed master's project and thesis in the student's area of interest, 30 credits of graduate work, and passage of the qualifying examination at the master's level. It is designed to strengthen the student's background and experience in physics, and enhance the opportunities for employment as a physicist or in physics education.

The research program in physics is unusually broad in scope with active experimental and theoretical research programs in astrophysics, atomic, molecular, and optical physics; biophysics; condensed matter physics; elementary particle physics; nuclear physics; particle physics theory; phenomenology; and plasma physics. This broad range of research opportunities makes the department especially attractive to beginning students who have not yet chosen a field of specialization.

Research specialties include:

THEORETICAL PHYSICS

Astrophysics; atomic, molecular, and optical physics; condensed matter physics; cosmology; elementary particle physics; nuclear physics; phenomenology; plasmas and fusion; quantum computing; statistical and thermal physics; string theory.

EXPERIMENTAL PHYSICS

Astrophysics; atomic, molecular, and optical physics; biophysics; condensed matter physics; cosmology; elementary particle physics; neutrino physics; experimental studies of superconductors; medical physics; nuclear physics; plasma physics; quantum computing; spectroscopy.

The Department of Physics has a diverse group of graduate students who come from many countries around the world. There are typically 150–200 graduate students in the department. Virtually all students admitted receive financial support in the form of teaching or research assistantships and fellowships.

The information on courses and examinations provided in this catalog is only a brief summary of the procedures for graduate work in the department. Entering graduate candidates are supplied with additional details when they arrive. More complete information on the graduate program, the faculty, and research groups is available at the department website. (http://www.physics.wisc.edu)

ADMISSIONS

Admission is competitive. All applicants are reviewed and evaluated on the basis of previous academic record, three letters of recommendation, statement of purpose for graduate studies, resume, and Graduate Record Exam (GRE) general and subject scores. The physics subject GRE exam is required. For applicants whose native language is not English, the department requires a minimum score of 580 (paper-based), 237 (computer-based) or 92 (internet-based) on the Test of English as a Foreign Language (TOEFL) exam, or 7 on the International English Language Testing System (IELTS) exam. All eligible applicants with complete files are considered for teaching or research assistantships and fellowships. To be considered for admission for summer or fall, students must submit all application materials (including test scores) via the Graduate School electronic application site (https://www.gradsch.wisc.edu/eapp/eapp.pl) by December 15. The department only rarely admits for spring term and cannot guarantee support in this case. Those interested in spring admission should submit all application materials listed above by November 1.

GRADUATE SCHOOL ADMISSIONS

Graduate admissions is a two-step process between academic degree programs and the Graduate School. Applicants must meet requirements of both the program(s) and the Graduate School. Once you have researched the graduate program(s) you are interested in, apply online (https://grad.wisc.edu/admissions).

FUNDING

GRADUATE SCHOOL RESOURCES

Resources to help you afford graduate study might include assistantships, fellowships, traineeships, and financial aid. Further funding information (https://grad.wisc.edu/funding) is available from the Graduate School. Be sure to check with your program for individual policies and processes related to funding.
Assistantships and Fellowships. Criteria for appointment as a teaching chairperson on the recommendation of the department’s Committee on Initial appointments to regular teaching assistantships are made by the Teaching Assistant Appointments per semester. Waived. TA appointments are granted for a semester at a time. Based on per semester for full-time students in the 2017–18 year. Tuition is also all in-state and out-of-state fees, except for the segregated fees ($630.12 assistant appointments of one-third time or greater receive a remission of and also helps prepare for a possible career in teaching. The typical first appointment for a beginning graduate student is a teaching assistantship (TA). A teaching assistantship is both a teaching position and a means of support for graduate study. It is normally advantageous for a graduate student to hold a TA position for at least a semester during graduate studies, since the teaching activity solidifies and deepens the teaching assistant’s undergraduate education in physics and also helps prepare for a possible career in teaching.

Teaching assistants and project assistants with combined graduate assistant appointments of one-third time or greater receive a remission of all in-state and out-of-state fees, except for the segregated fees ($630.12 per semester for full-time students in the 2017–18 year). Tuition is also waived. TA appointments are granted for a semester at a time. Based on a 50% appointment at the standard rate, a TA earns approximately $8,000 per semester.

Teaching Assistant Appointments

Initial appointments to regular teaching assistantships are made by the chairperson on the recommendation of the department’s Committee on Assistantships and Fellowships. Criteria for appointment as a teaching assistant include:

1. A good academic record in an undergraduate physics major, as a graduate student in physics, or other firm evidence of mastery of undergraduate physics.

2. Working knowledge of oral and written English.

3. Ability to communicate effectively with undergraduate students.

4. Good standing as a graduate student in the University of Wisconsin. This is a university requirement for holding an assistantship. “Good standing” is defined in terms of quantity of academic work carried (number of credit hours) and the quality of the work (B average for a graduate student).

5. When several candidates are qualified according to the preceding criteria, we give preference to those who show the most promise for Ph.D. research as judged by the Committee on Assistantships and Fellowships.

6. Last-minute or short-term appointments may be made on a temporary (one semester) basis by the chairperson. Such limited term appointments do not carry any assurance of continuing support.

7. Reappointments (from limited-term status) to teaching assistantships with assurance of continuing support are made by the department after receiving the recommendation of the Teaching Assistant Review Committee. In addition to the criteria listed under (1), the criteria for reappointment as a teaching assistant include:

8. Satisfactory performance as a teaching assistant.

9. Satisfactory progress as a graduate student, as discussed above. Whenever possible, teaching assistantships are half-time appointments. However, appointments less than half-time may be used to meet a special need of an individual appointee, or to cover special, often last-minute, teaching assignments.

10. If a teaching assistant transfers to another department, the commitment to continuing support is terminated. However, exceptions may be made for joint Ph.D. programs or in other special circumstances, at the option of the department.

Regular Half-Time Teaching Assignments

The following assignments are typical half-time assignments. A teaching assistant should be able to do a satisfactory job in one of these assignments without exceeding the 360 hour per semester workload for half-time appointment. The amount of time spend on the assignments may, of course, fluctuate from week-to-week.

Courses // Assignment

| PHYSICS 103, PHYSICS 104 | 3 laboratory-discussion sections |
| PHYSICS 109 | 4 laboratory sections PHYSICS 201, PHYSICS 202, PHYSICS 207, PHYSICS 208 | 2 laboratory-discussion sections |

Representative breakdowns of allocation of the 360 hours among duties such as preparation, meeting classes and labs, attending lectures and course meetings, conferences with individual students, helping with registration, etc., is available in the department office.

Evaluation of Teaching Performance

The teaching performance of each teaching assistant is evaluated every semester by the TA review committee. The appointments of teaching assistants who are given unsatisfactory ratings may be terminated. Outstanding teaching assistants may be nominated for one of the campus-wide teaching awards. Material considered in the review will include the results of teaching evaluation questionnaires filled out by the students in the teaching assistant’s sections, the evaluation of the teaching assistant by the faculty member in charge of the course, and any other relevant information submitted to the committee by students, faculty, the teaching assistant in question, or other teaching assistants. A summary of the results of the evaluation is sent to each TA, and a copy is maintained by the department. Teaching assistants are required to look at this information after the review, since it is often valuable for self-evaluation and improvement.

Research Assistantships

Research assistantships are made available by individual professors to students who have decided on their field of research. Most departmental RA appointments are made for an annual (12 months) period. Both in-state and out-of-state tuition will be waived for research assistants holding combined graduate assistant appointments of one-third time or greater. However, all students must still pay the segregated fees, which are $630.12 per semester for full-time students for the 2017–18 year.
Applicants who wish to be considered for an RA appointment should contact the faculty (https://www.physics.wisc.edu/people/faculty) directly.

Fellowships
Fellowships, including University Fellowships and Advanced Opportunity Fellowships, are awarded by the Graduate School upon recommendation of the Department of Physics. In addition, the department may have additional fellowships—funded by endowments from physics department alumni—available for first-year graduate students. Information on these fellowships is available on the department website (https://www.physics.wisc.edu/academics/gradstudents/fellowships).

Information on nondepartmental fellowships can be found on the Graduate School funding page (http://grad.wisc.edu/studentfunding/types).

REQUIREMENTS

MINIMUM GRADUATE SCHOOL REQUIREMENTS

Mode of Instruction Definitions

Evening/Weekend: These programs are offered in an evening and/or weekend format to accommodate working schedules. Enjoy the advantages of on-campus courses and personal connections, while keeping your day job. For more information about the meeting schedule of a specific program, contact the program.

Online: These programs are offered primarily online. Many available online programs can be completed almost entirely online with all online programs offering at least 50 percent or more of the program work online. Some online programs have an on-campus component that is often designed to accommodate working schedules. Take advantage of the convenience of online learning while participating in a rich, interactive learning environment. For more information about the online nature of a specific program, contact the program.

Hybrid: These programs have innovative curricula that combine on-campus and online formats. Most hybrid programs are completed on-campus with a partial or completely online semester. For more information about the hybrid schedule of a specific program, contact the program.

Accelerated: These on-campus programs are offered in an accelerated format that allows you to complete your program in a condensed time-frame. Enjoy the advantages of on-campus courses with minimal disruption to your career. For more information about the accelerated nature of a specific program, contact the program.

CURRICULAR REQUIREMENTS

<table>
<thead>
<tr>
<th>Minimum Residence Credit Requirement</th>
<th>30 credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum Graduate Coursework Requirement</td>
<td>Half of degree coursework (15 credits out of 30 total credits) must be completed graduate-level coursework; courses with the Graduate Level Coursework attribute are identified and searchable in the university’s Course Guide (<a href="https://registrar.wisc.edu/course-guide/">https://registrar.wisc.edu/course-guide/</a>). No 300-level courses will be counted toward the 30 credit minimum.</td>
</tr>
<tr>
<td>Overall Graduate GPA Requirement</td>
<td>3.00 GPA required.</td>
</tr>
<tr>
<td>Other Grade Requirements</td>
<td>The Graduate School requires an average grade of B or better in all coursework (300 or above, not including research credits) taken as a graduate student unless conditions for probationary status require higher grades. Grades of Incomplete are considered to be unsatisfactory if they are not removed during the next enrolled semester.</td>
</tr>
<tr>
<td>Assessments and Examinations</td>
<td>All master of science degree candidates must pass the qualifying examination at the master’s level.</td>
</tr>
<tr>
<td>Language Requirements</td>
<td>Master of science degree candidates must write a master’s thesis and defend that thesis in a seminar.</td>
</tr>
</tbody>
</table>

REQUIRED COURSES
All graduate degree candidates are required to take five core courses:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>PHYSICS 711</td>
<td>Theoretical Physics-Dynamics</td>
<td>3</td>
</tr>
<tr>
<td>PHYSICS 715</td>
<td>Statistical Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>PHYSICS 721</td>
<td>Theoretical Physics-Electrodynamics</td>
<td>3</td>
</tr>
<tr>
<td>PHYSICS 731</td>
<td>Quantum Mechanics</td>
<td>3</td>
</tr>
<tr>
<td>PHYSICS 732</td>
<td>Quantum Mechanics</td>
<td>3</td>
</tr>
</tbody>
</table>

The remaining 15 credits may be earned through a combination of research (PHYSICS 990 Research) and coursework, to be determined by the advisor in consultation with the student.

POLICIES

GRADUATE SCHOOL POLICIES
The Graduate School’s Academic Policies and Procedures (https://grad.wisc.edu/acadpolicy) provide essential information regarding general university policies. Program authority to set degree policies beyond the minimum required by the Graduate School lies with the degree program faculty. Policies set by the academic degree program can be found below.
MAJOR-SPECIFIC POLICIES
GRADUATE PROGRAM HANDBOOK
The Graduate Program Handbook (https://www.physics.wisc.edu/sites/default/files/grad_handbook_2017-18b.pdf) is the repository for all of the program’s policies and requirements.

PRIOR COURSEWORK
Graduate Work from Other Institutions
No coursework from other institution may count toward any graduate degree in physics.

UW–Madison Undergraduate
Up to 7 credits in courses numbered 500 or above may be used to satisfy minimum degree requirements.

UW–Madison University Special
With program approval and payment of difference in tuition (between Special and graduate tuition), students are allowed to count no more than 15 credits of coursework numbered 500 or above taken as a UW–Madison University Special student. Coursework earned five or more years prior to admission to a master’s degree is not allowed to satisfy requirements.

PROBATION
The Graduate School regularly reviews the record of any student who earned grades of BC, C, D, F, or Incomplete in a graduate course (300 or above), or grade of U in research credits. This review could result in academic probation with a hold on future enrollment or in being suspended from the Graduate School.

ADVISOR / COMMITTEE
All students are assigned a temporary advisor upon matriculation. The responsibility to acquire (choose and be accepted by) a major professor (permanent advisor) is entirely with the student. Acceptance for M.S. research by a professor depends on the professor’s appraisal of the student’s potential for research and on the ability of the professor to accept a student at that time. Usually the major professor will be able to offer support in the form of a research assistantship, but this is not always the case, and occasionally a student may need to work as a teaching assistant while performing thesis research.

Graduate students should begin research work as early as possible. Students are encouraged to acquire a major professor (advisor) and begin research by the end of the second semester. Summer is the ideal time to begin research unencumbered by coursework or teaching. Students who do not acquire a research advisor and begin research by the end of their third semester may be dropped from the program.

All M.S. candidates write a master’s thesis and present their research in a seminar. All master’s theses must be approved by a committee comprised of the student’s advisor and one additional faculty member.

CREDITS PER TERM ALLOWED
15 credits

TIME CONSTRAINTS
Master’s degree students who have been absent for five or more consecutive years lose all credits that they have earned before their absence. Individual programs may count the coursework students completed prior to their absence for meeting program requirements; that coursework may not count toward Graduate School credit requirements.

OTHER
Typical funding is through 50% assistantships. Virtually 100% of enrolled students are funded for the duration of their degree. All programs are full time and require full-time student enrollment during fall and spring terms.

PROFESSIONAL DEVELOPMENT

GRADUATE SCHOOL RESOURCES
Resources to help you afford graduate study might include assistantships, fellowships, traineeships, and financial aid. Further funding information (https://grad.wisc.edu/funding) is available from the Graduate School. Be sure to check with your program for individual policies and processes related to funding.

PROGRAM RESOURCES
PROFESSIONAL DEVELOPMENT OPPORTUNITIES FOR PHYSICS GRADUATE STUDENTS
Our students have multiple opportunities for professional development throughout their graduate careers. As an integral part of research experience, students regularly work at CERN, national laboratories (Argonne, FermiLab), IceCube Neutrino Observatory at the South Pole etc.

Students are encouraged to travel to relevant conferences across the U.S. and the globe. Our students regularly attend the annual American Physical Society (APS) March Meeting and are encouraged to attend APS meetings in their sub-field throughout the year. We also encourage students to attend summer schools at various host institutions to expand their knowledge and to interact with fellow scientists in their field.

All incoming graduate students receive extensive TA training during a week long, comprehensive program designed and implemented by our Director of Introductory Labs. Students are also encouraged to join the DELTA program on campus which provides excellent training and mentorship for those interested in teaching. Each spring we offer a for credit course PHYSICS 603 Workshop in College Physics Teaching.

This gives our students the opportunity to learn effective teaching methods, do research into new teaching practices, and provides a forum for students and the instructor to openly discuss challenges and rewards of teaching.

Students are also encouraged to attend Graduate School sponsored Professional Development events and participate in Graduate School Professional Development resources, such as the Individual Development Plan (IDP).

LEARNING OUTCOMES
1. Mastery of the core physical concepts (classical mechanics, electricity and magnetism, quantum mechanics, and statistical mechanics).
2. Articulates, critiques, or elaborates the theories, research methods, and approaches to inquiry or schools of practice in physics.
3. Identifies sources and assembles evidence pertaining to questions or challenges in physics.

4. Demonstrates understanding of the physics in an historical, social, or global context.

5. Selects and/or utilizes the most appropriate methodologies and practices.

6. Evaluates or synthesizes information pertaining to questions or challenges in physics.

7. Communicates clearly in ways appropriate to the field of physics.

8. Recognizes and applies principles of ethical and professional conduct.

**People**

**Faculty:** Professors Dasu (chair), D. Anderson, Balantekin, Barger, Boldyrev, Carlsmith, Chung, Coppersmith, Eom, Eriksson, Everett, Forest, Gilbert, Halzen, Hanson, Hashimoto, Hegna, Heinz, Hemdon, Ioffe, Joynt, Karle, Knezevic, Lagally, Lawler, Lazarian, Lin, McCammon, McDermott, Onellion, Rzchowski, Saffman, Sarff, Shiu, W. Smith, Sovinec, Terry, Timbie, Vavilov, Walker, Westerhoff, Winoku, Wu, Yavuz, Zweibel; Associate Professors Egedal, Levchenko, Pan; Assistant Professors Bai, Bechtol, Brar, Kats, Kolkowitz, Palladino, Vandenbroucke, Vetsigian
