AFRICAN/AFROAMER 233 — GLOBAL HIPHOP AND SOCIAL JUSTICE  
3 credits.

Can HipHop culture help produce a more just world? If so, what theory and praxis best advance this aim? These are the questions that drive this conceptual course. Our critical interrogation of the relationship between HipHop and social justice considers the culture from its U.S. Black Power era underpinnings to its disparate contemporary "glocal" manifestations. We begin by asking what is "HipHop," what is "social justice," and what is their relationship, and proceed to consider how HipHop can be an effective force for social justice and what obstacles mitigate against this potential. These discussions will develop familiarity with important concepts in Black studies and social theory such as race and colonialism, imperialism and hegemony, structure and agency, identity and strategic essentialism. Weekly readings will typically pair writings specifically on HipHop with theory from across the humanities and social sciences including philosophy, sociology, cultural studies, and political economy. We will endeavor to consider the race/class/gender dimensions of our weekly topics. Students will acquire a broader familiarity with HipHop activism, and develop new conceptual tools and critical thinking skills.

AFRICAN 403 — THEORIES OF AFRICAN CULTURAL STUDIES
3 credits.

This course is a study of the many ways of understanding the entire spectrum of culture and cultural production, circulation, consumption, and meaning making in Africa. It foregrounds material and imaginative cultural forms and practices-their origins, languages, contents, forms, functions, genres, audiences-as well as how these have been conceived and theorized by practitioners and scholars in the context of Africa and the world. The course will also examine the uses to which particular meanings of culture and its forms are put, by whom, and to what purpose, and how meanings are fought over, reshaped, and reconstituted, and under what conditions those are or can be possible. This is what “theory of African cultural studies” means in its most robust and imaginative senses. We will survey the entrenched modes of both conceptual and critical apprehension of the cultural forms and practices (from Negritude to postcolonialism and postmodernism), explore their methods of reading, raise the issue of their linkages to sources in Euro-America, and assess the extent to which the unique concerns of the biography of culture in Africa (expressed by its creators and scholars) have tried to tame and refashion what are now globally shared critical tools of cultural reading.

AFRICAN 408 — TOPICS IN US AND GLOBAL BLACK MUSIC STUDIES
3 credits.

This course will introduce students to the phenomenon of "musical blackness" as a US-based, transnational cultural form and practice. In each class (topics will vary), students will learn about how US-based, racially specified black musical forms, together with global forms also identified as "black," were constituted as part of the legacies of European colonial encounter and US imperial expansion; the categories of "traditional" music and popular style took shape and have been experienced as something part and parcel of this historical process. By giving close consideration to genre, style, and performance practice, the course will help students to understand the many ways in which musical sound and social/political ideas are inextricably linked.

AFRICAN 605 — ADVANCED TOPICS IN AFRICAN CULTURAL STUDIES
3 credits.

This course will introduce students to foundational texts in the study of modern Africa and the social, political, and economic contexts of the continent's cultural production and productivity. We will organize our conceptual explorations around such interesting issues as the African encounter with Europe, anticolonialism, race, racialism, and subjectivity, African and European languages and epistemology, transformations in gendered structures, and the environment, and the circulation and consumption of cultural forms and practices. This course will encourage students to think about the long histories and theories of cultural production and practices in Africa, the local/global provenance of forms and styles, and the contexts of their local, national, and global circulation and consumption. The course will promote critical thinking by challenging students to put like and unlike texts together and pay attention to rhetoric and implied meanings, all in the context of Africa's interactive history with the world in the modern era.

AFRICAN 803 — THEORIES OF AFRICAN CULTURAL STUDIES
3 credits.
This course is a study of the many ways of understanding the entire spectrum of culture and cultural production, circulation, consumption, and meaning making in Africa. It foregrounds material and imaginative cultural forms and practices—their origins, languages, contents, forms, functions, genres, audiences—as well as how these have been conceived and theorized by practitioners and scholars in the context of Africa and the world. The course will also examine the uses to which particular meanings of culture and its forms are put, by whom, and to what purpose, and how meanings are fought over, reshaped, and reconstituted, and under what conditions those are or can be possible. This is what "theory of African cultural studies" means in its most robust and imaginative senses. We will survey the entrenched modes of both conceptual and critical apprehension of the cultural forms and practices (from Negritude to postcolonialism and postmodernism), explore their methods of reading, raise the issue of their linkages to sources in Euro-America, and assess the extent to which the unique concerns of the biography of culture in Africa (expressed by its creators and scholars) have tried to tame and refashion what are now globally shared critical tools of cultural reading.

AFROAMER/AFRICAN 233 — GLOBAL HIPHOP AND SOCIAL JUSTICE
3 credits.

Can HipHop culture help produce a more just world? If so, what theory and praxis best advance this aim? These are the questions that drive this conceptual course. Our critical interrogation of the relationship between HipHop and social justice considers the culture from its U.S. Black Power era underpinnings to its disparate contemporary "glocal" manifestations. We begin by asking what is "HipHop," what is "social justice," and what is their relationship, and proceed to consider how HipHop can be an effective force for social justice and what obstacles mitigate against this potential. These discussions will develop familiarity with important concepts in Black studies and social theory such as race and colonialism, imperialism and hegemony, structure and agency, identity and strategic essentialism. Weekly readings will typically pair writings specifically on HipHop with theory from across the humanities and social sciences including philosophy, sociology, cultural studies, and political economy. We will endeavor to consider the race/class/gender dimensions of our weekly topics. Students will acquire a broader familiarity with HipHop activism, and develop new conceptual tools and critical thinking skills.

AN SCI 444 — LABORATORY TECHNIQUES IN MAMMALIAN GAMETE AND EMBRYO BIOLOGY
3 credits.

This course is designed as an immersion experience based on the gradual release methodology of information delivery. Students are engaged in active/process learning whereby the principles and themes presented in the lecture portion of the course are immediately put into practice in the laboratory component of the course. Expected learning outcomes and learning objectives are therefore integrated into each lecture and laboratory. Each subsequent learning objective builds upon the knowledge acquired from the previous learning objective thus developing a scaffold or framework from which to proceed. This course will present students with challenges from cognitive and affective domains as they process information from both biological and ethical perspectives. Problem solving and conflict resolution skills will be displayed as students challenge themselves with the development of fine motor/coordination based skills as well as understanding that the product of their efforts has the potential to result in a live offspring. The bovine (cow/bull) will serve as our model in this performance-based course as students are expected to demonstrate competency in the nuances and complexities associated with the production of embryos in a completely artificial (in vitro) environment. The student will be expected to demonstrate critical thinking by developing a simulated professional enterprise involving one or more of the assisted reproductive technologies they are exposed to. Students will demonstrate proficiency in and competency of in vitro maturation, fertilization, embryo development, cell culture, sterile bench technique, synchronization of the female estrus cycle, embryo transfer, non-surgical embryo recovery and cryopreservation by completing 2 complete cycles of embryo production in vitro. Students work in teams of 3-4 individuals. During the first production cycle students will perform all tasks while observing and working alongside of the instructor. The second production cycle will require the students to perform independently (of the instructor) who will only intervene in the event that the actions of the student will be lethal to the process and/or outcome. Each week (Monday) students will be presented with a controversial subject or topic related to cellular biology and/or reproduction. These ethical dilemmas are almost entirely within the realm of human assisted reproduction. Using any means and/or media desired, students are required to formulate responses in favor and in opposition of said topic. Each Friday, following the course quiz, students will be randomly selected to defend one side of the argument by articulating their viewpoint from the assigned perspective even if it is not their personal opinion. The objective of this exercise is to demonstrate the nature and influence bioethics may have on policy decisions impacting future research endeavors and/or science based initiatives. As well, students will grapple with representing a viewpoint they may be in personal conflict with.

This course will provide an introduction to genetic epidemiology. Topics will include a general overview of genetics and Mendelian and complex inheritance, as well as various elements of study design, including participant ascertainment; phenotype definition; biologic sample selection; genotyping, sequencing, and quality control; measurement of covariates, and choice of analytic methods. We will briefly discuss some of the original study designs and then focus on current study designs for the remainder of the class. Additional emerging topics will be briefly touched upon. Students will complete short homework assignments to reinforce concepts learned during lectures, discuss journal articles, and prepare a very short grant application for the mid-term project. In the final weeks of class, students will work together to analyze data from a real genetic study, prepare tables, interpret the findings, and present their project to their peers.

ART HIST 201 — HISTORY OF WESTERN ART I: FROM PYRAMIDS TO CATHEDRALS
4 credits.

Examines the arts and cultures of Europe and the Mediterranean basin before the Renaissance. We explore canonical works such as the pyramids at Giza, the Parthenon in Athens, the Venus di Milo, Hagia Sophia in Constantinople, the Book of Kells, the Great Mosque at Córdoba, Chartres cathedral, and Giotto's Arena Chapel. But we also define art broadly, to encompass the material culture of everyday life, including jewelry, ceramics, and textiles. We consider the social and historical contexts of art and artistic production - art and imperialism, ethnicity, technology, religious ritual and belief, and myth and storytelling. These explorations address basic human concerns: death and the afterlife, desire and the body, self-definition and portraiture, power and propaganda, monstrosity and the supernatural, the divine and the sacred. We develop crucial skill sets: critical visual analysis, contextual interpretation, research methods and resources, historiography, and oral, written and digital communication. Students will apply these skills in assignments focused on works of art in the Chazen Museum.

ART HIST 202 — HISTORY OF WESTERN ART II: FROM RENAISSANCE TO CONTEMPORARY
4 credits.

Examines the arts and cultures of Europe and North America from the Renaissance through the present. Our discussions will explore important masterpieces by such renowned artists as Leonardo da Vinci, Rembrandt van Rijn, Claude Monet, Paul Cézanne, Pablo Picasso, Frida Kahlo, and Frank Lloyd Wright alongside other works of fine art, architecture, the decorative arts, and photography. By studying the political, historical, social and cultural contexts of their making, we will begin to understand how certain works of art were valued from the moment of their making, fought over by different nations, bought, sold, stolen, or ignored for centuries and revived only recently for study. We will critically examine the concept of artistic genius; the influence of colonialism and imperialism on artistic production and consumption; the role of the patron and the art market in art's production and circulation; the relationship of fine art and popular culture; and the idea of globalization as it relates to "western" artistic traditions. Students will develop skills in visual analysis that can help them understand artistic production over the past 500 years as well as succeed in today's visually oriented culture. They will also learn about dominant interpretive approaches and research tools in art history that have applicability across the humanities as well as digital applications that will help them create online exhibitions. Many assignments will focus on works of art in the Chazen Museum of Art.

ART HIST 205 — GLOBAL ARTS
4 credits.

ART IS GLOBAL (and always has been). Today, we find Egyptian protest artists inspiring activists around the globe via the internet, but in earlier times, Roman glass and Buddhist icons moved along the ancient Silk Route, networks of exchange flourished in the medieval Mediterranean region, and colonial empires brought visual cultures into volatile contact. This course teaches students how to analyze images and objects produced through such exchanges that occurred around the world from ancient times through the contemporary. Its aims are to develop skills needed to live fully in a world in which borders are no barriers to the movement of images, objects, and ideas and to deepen understanding of cultural differences and interactions. By exploring works in a range of media and tracing processes of cross-cultural exchange, the course also develops sensitivity to visual and material form and a solid foundation in the practice of visual and material analysis.

ART HIST 227 — THE ENDS OF MODERNISM
4 credits.

This course considers the end of Modernist art as it gives way to what is called, problematically, contemporary art. While the term modern may generally mean what is vanguard or current, Modernism indicates a period of art (and the humanities) ranging from, arguably, 1880-1950. By considering its end, one can study four pivotal aspects of the movement: its origins, themes, and afterlives, as well as the art and histories that challenge its coherence. In this thematic survey, then, Modernism will emerge as a heterogeneous set of images and attendant discourses which, negatively or positively, continue to work within the contemporary artistic and cultural moment.

ART HIST 301 — MYTHS, LOVES, AND LIVES IN GREEK VASES
3-4 credits.

Explore the world of the ancient Greeks through their painted pottery. Greek pottery offers a uniquely rich imagery of mythology, athletics, domestic scenes, fabulous monsters, drinking parties, and other aspects of Greek life and imagination. They were used by ordinary people, and their use offers insights into their everyday lives and concerns, and a counterbalance to the elite accounts preserved in literature and poetry. The course will consider the long history of Greek vases from about 800 BC until about 350 BC, and focus on themes such as relationships with the East, myth and epic poetry, narrative, and everyday subjects such as women's lives, death and the afterlife, and the symposium. We will make use of the excellent collection of Greek vases in the Chazen Museum, and students will write research papers using that collection.

ART HIST 331 — ANGELS, DEMONS, AND NUDES: EARLY NETHERLANDISH PAINTING FROM BOSCH TO BRUEGEL
3-4 credits.

Over the course of the fifteenth and sixteenth centuries, painting in the Netherlands experienced dramatic technological advancements: the application of oil on panel allowed for an unprecedented richness of color; experiments with optics led to improved illusions of space; artists rendered light and reflections as never before. Did these advancements in depicting the natural world conflict with or enhance the portrayal of spiritual visions? Did realism pave the way for secular art? In this course, we will look critically at the relationship of science and art, tradition and innovation, the imagined and the experienced. The delicate preciousness of Jan van Eyck, the strange spaces of Petrus Christus, the bizarre hellscapes of Hieronymus Bosch, and the peasant festivals of Peter Bruegel will guide us through these themes.

ART HIST 360 — EARLY MODERN ART OF NORTHERN EUROPE: RENAISSANCES AND REFORMATIONS
3 credits.

This course critically reexamines concepts traditionally associated with the Renaissance by focusing on the exchange of artistic ideas throughout the Holy Roman Empire and across different media, such as altarpiece paintings, carved portraits, stained glass narratives, innovative uses of print, reappropriations of metalwork, and expressive uses of drawing. The course is organized thematically around four topics: religious art as piety and politics; antiquity as a source of tradition and imagination; the formulation of a public discourse that exposed social threats; and the distinctiveness of artistic claims of individual achievement. A motif throughout the course is the question of how the survival of fragments may be presented in museum contexts as parts standing in for an absent whole. Special topics address collecting, conservation, and technical research. We will also consider how historians approach designs for works of art now lost or never completed. Assignments focus on objects from the Chazen Museum and the Special Collections of Memorial Library.

ART HIST 364 — HISTORY OF AMERICAN ART: ART, MATERIAL CULTURE, AND CONSTRUCTIONS OF IDENTITY, 1607-PRESENT
3-4 credits.

This course examines the history of American art from the period of permanent European settlement through the present. Works of art and other forms of material culture will be explored and discussed within the context of philosophical, historical, social, and cultural developments in the United States and across the globe. In this course, works of art and artifacts are interpreted not as passive objects that reflect history, but rather as active agents that are entwined with broader historical, social, and cultural events. A particular focus will be on the ways in which American art and material culture participates in the construction of identities ranging from local identities and national identities (in particular, how notions of "American" have been constructed) to regional, group and individual identities. Although the course will mainly cover works of painting, sculpture, and architecture, other forms of material culture, especially photography, decorative arts and popular illustrations, will also be considered. Attention will also be given to the writings of artists and critics, as well as texts by contemporary art historians, historians, and other scholars that illustrate the variety of methods that are currently being brought to bear on the interpretation of American art, architecture, and material culture. Students will learn skills that will help them construct histories of American art and material culture in written narratives (papers) as well as in online exhibitions through a series of short research exercises. Outside of examinations, assignments will be tied to works of art on display at the Chazen Museum of Art or other local collections.

3-4 credits.

Traces out some of the radical changes in art produced after roughly 1950, or what might be called contemporary art. By using the term contemporary, however, we also refer to a certain broadly defined set of ideas that inform and emerge from this highly diverse production. The course will largely (although not exclusively) focus on American and European art after the ”decline” of Modernism. That entails familiarizing the class with movements ranging from color field painting, to postmodern production, to performance, video, and installation. Additionally, attention will be paid to artists and artwork that are not adequately represented by the traditional categories of art history.

ART HIST 413 — ART AND ARCHITECTURE IN THE AGE OF THE CALIPHS
3 credits.

The tenth century CE marked a period of drastic change in the Islamic world, as the unified Islamic caliphate splintered into three rival dynasties: the Sunni Iraqi Abbasids, Spanish Umayyads, and the Shi’ite Fatimids in Egypt. In their quest to dominate the Islamic world and control the Mediterranean, each dynasty openly competed and responded to the others in architectural projects, ceremonial practices and courtly arts. At the same time, the monolithic model of courtly patronage of the arts was replaced gradually by one in which the urban classes increasingly shaped the art market, resulting in new visual forms. This course considers this turning point in the history of Islamic culture through the lens of art and architectural patronage. By exploring the architectural and urban projects of the three dynasties, we will examine competing visions of power, sources of legitimacy and the development of Cairo, Baghdad/Samarra and Cordoba as capital cities. We will also consider the role of portable arts, addressing the role of exchange and gift-giving in the Mediterranean context and the problems of attribution in this highly mobile environment. Course themes include the role of sectarian identity (Shi’ite vs Sunni); the incorporation of Christian and Jewish culture; the relation between the court and urban populations; and the meaning of ornament and style in Islamic art.

CLASSICS 150 — ANCIENT GREEK AND ROMAN MONSTERS
3 credits.

Ancient monsters were forces of chaos that threatened the natural order of the universe: they had to be contained, banished to the edges of the world or destroyed. But the Greeks and Romans also believed them to be magical beings that held the promise of special knowledge - of the past, of dangers to be faced, of musical arts - or which, like the Sphinx, possessed an enigmatic intelligence capable of fooling all but the most cunning of mortals. In this course we investigate these contrasting aspects of ancient monsters, drawing directly on texts (in translation) and works of art through which the Greeks and Romans explored the monstrous and its place in their world. We also compare ancient representations with those in modern artistic media - comics, games, stories and movies - considering both how our notions of the monstrous are influenced by or contrast with those of our ancient predecessors, and how our very identities are created by and enacted through our depictions of monsters.

CLASSICS 340 — CONSPIRACY IN THE ANCIENT AND MODERN WORLDS
3 credits.

Focusing primarily on the world of the ancient Romans, this course (in translation) interrogates the phenomenon and notion of "conspiracy" within the political, social, and religious spheres. After investigating some of the more famous political conspiracies (e.g. the Catilinarian Conspiracy, assassination of Julius Caesar, etc.), we will then turn to the structure of the traditional Roman household, including the preeminence of the paterfamilias and the challenges that women, children, and/or slaves pose to his notional "tyranny." Finally, we will consider a number of prominent religions that came into conflict with Roman authorities - especially the mystery cults surrounding Bacchus as well as early Christianity. We will also have the opportunity to bring to bear the insights gleaned from the ancient world on the modern one in our consideration of such modern conspiracies as the Salem Witch Trials, the Red Scare of the '50s, the Kennedy Assassination, and the Watergate Conspiracy. As we shall see, "conspiracy" can be a tendentious concept that often reveals more about the society and culture in which it occurs (as well as the authors who write about it) than the actual activities it would seem to denote.

This course is intended to help students understand World War II from the perspective of Asia. The focus is not only on the American and Japanese roles in the war but also on lesser, often overlooked participants such as China, Korea, and Southeast Asia. The course will focus not only on the diplomatic, political, and military situation of wartime Asia, but also on perceptions and experiences of the war from those most heavily affected by it: those experiencing it on the ground. Understanding this war is critical for helping us understand contemporary Asia. The foundations of the Cold War and the post-Cold War world that we live in today were forged on battlefields in mainland China, Burma, small islands in the Pacific, and in the skies over the archipelago of Japan. In order to provide the background and understand the legacies, this course covers an extended time frame, beginning in the 19th century with the arrival of the West in Asia and continues into the 1950s.

This course addresses current debates about the nature of poverty, how it might be ameliorated, how poverty is related to other inequities and unequal relations of power, and how theories of international development might help us analyze these changing relations around the world. Education is often understood as a way to end poverty. What are the underlying assumptions behind this idea? What are the contemporary educational interventions designed to end poverty? What are the dilemmas, contradictions, and limitations related to these interventions? In particular, if education is supposed to end poverty, how do we understand the stratifying outcomes of educational policies, practices, and institutions in the U.S. and globally?

3 credits.
This course considers a period of unparalleled tumult: a time of vast world empires and startling new technologies, revolutions that radically redefined self and community, two cataclysmic world wars, the emergence of ideas of human rights, and the first truly global feelings of interconnectedness. How has literature captured and contributed to these dramatic upheavals? Some writers worldwide have struggled to invent new forms, new words, and new genres to do justice to a world in crisis, while others have reached back in time, seeking continuity with the past. We will explore enduring traditions of poetry and drama and think about experiments in the new, globally popular genre of the novel. This course develops skills of critical reading and writing that are essential to majors and non-majors alike.

ENGL 243 — AMERICAN LITERARY CULTURES
3 credits.
Is America a new world, a city on a hill, an imperial power? Are American literatures revolutionary, nationalist, countercultural? This course explores how writers have wrestled with such questions for several hundred years. We will encounter literary figures from white whales to red wheelbarrows, focusing on the diverse geographies, cultural practices, and political mythologies that compose the Americas, and interrogating what is meant by American literature and what it means to be American. We will consider the ways that genres from Native stories to slave narratives to postmodern novels have contributed to social, intellectual, and political currents of American cultures. This course develops skills of critical reading and writing that are essential to majors and non-majors alike.

3 credits.
This class is about what happens to English drama after Shakespeare's death. Public theaters closed, considered too racy for the moral health of the population. When they reopened in 1660, sex took center stage in productions of plays both old and new. Women acted on stages in London for the first time, both in roles originally written for cross-dressing boys and in new ones designed for female actors. Female playwrights entered the scene as well, writing for financial profit alongside their male counterparts. This class will read a sampling of plays and theatrical entertainments performed during the Restoration and eighteenth century as well as publications surrounding the world of the theater to gain a sense of drama on the page and on the stage. 3 credits.

The course will explore classic literary and cultural texts from three regions: Africa, the Caribbean, and African America. We will consider the origins and evolution of the African diaspora, and the many forms of its expression. We will consider how the African diaspora has shaped US society today, exploring significant themes such as slavery and colonialism, race and cultural identity, intra-racial/cultural and cross-continental alliances and antagonisms; gender and genre; and the paradoxical fate so far-cultural visibility but peripheral political and economic power of global Afro-cultures. We will think about how African-American writers have been influenced by the experience of the African diaspora, and also about the ways that cultural expression from around the world has shaped US culture. This course will encourage students to think about how long histories of race, identity, and slavery continue to shape our present; it will promote critical thinking by challenging students to question claims made by others and their own assumptions; it will invite students to think through the perspectives of others with empathy and respect, and stimulate thinking about identity.

ENGL 413 — ENGLISH WORDS: GRAMMAR, CULTURE, MIND
3 credits.

Words and rules of combination (grammar) are the two basic building blocks of language. In this course, we will look at English words from different linguistic perspectives: As objects of grammar, words follow certain rules of combination (you wouldn’t say “these dog”), but they also have internal structure. For example, a word like “hopefulness” does not exist, while “hopenessful” does not exist. From a psycholinguistic perspective we will examine how children learn these formal properties as well as the meaning of words. We will also study how words are stored in the mind and what one can learn from situations in which one cannot access the mental dictionary properly (for example, when one feels a word is on “the tip of one’s tongue”). From a sociolinguistic perspective, we will look at historical and current influences on English vocabulary, including the role of dictionaries and spelling as a source of standardization. This course does not require previous knowledge of linguistics.

ENTOM/F&W ECOL 711 — MULTIVARIATE ANALYSIS OF ECOLOGICAL AND COMMUNITY DATA
2 credits.

This course will examine some common methods of multivariate data analysis in ecology and environmental science. Often called "community data analysis," this class will cover methods for the analysis of complex, multidimensional datasets that are collected in the study of plant, invertebrate, fish, and bird communities. We will also address the concurrent analysis of the environmental factors that may drive community distributions. All of this provides the basis for predictive modeling of distributions across landscapes. General methods we will cover include ordination (PCA, DCA, NMDS, CCA), clustering (or classification), and other comparative analyses of data matrices (ANOSIM, Mantel tests). The “class” (better called a “workshop”) is designed to be applied, meaning that the objective is for students to learn in a “hands-on” way how to use these tools, and the circumstances under which their uses are either appropriate or inappropriate.

This course provides an exploration of the global and local nature of environmental problems facing us, including issues of climate change, food, energy, economic globalization, deforestation and land use change, biodiversity loss, resource scarcity and access, environmental justice, and population. This course covers a broad cross-section of American environmental policy by focusing on specific statutes and policy arenas. HEART (Humanistic Elective in alternative medicine, Activism, and Reflective Transformation) is an AMSA (American Medical Student Association) sponsored, month long elective for fourth-year medical students. Twenty-five medical students from across the nation will come together to live in an intentional community at a retreat center for the month of April each year in the California redwoods to explore the nature of healing, activism, self-care and personal reflection. Five medical student leaders are chosen through a competitive application process each year to organize the rotation under the guidance of a group of faculty mentors. Experts in integrative medicine, nutrition, humanism, non-violent communication, health policy, and public health will lead didactic and experiential workshops throughout the month. Students will also participate in a community service project as a way to synthesize and act upon core aspects of the curriculum in the surrounding community. The faculty who participate in this rotation come from institutions from around the county, including the University of California-San Francisco, University of Minnesota, University of Florida, as well as core integrative medicine faculty from the University of Wisconsin. Independent donors and student tuition provide funds, and these cover on-site transportation, meals, housing, and all required curricular activities.
