F&W ECOL/ENTOM 711 — MULTIVARIATE ANALYSIS OF ECOLOGICAL
AND COMMUNITY DATA
2 credits.

This course will examine some common methods of multivariate
data analysis in ecology and environmental science. Often called
"community data analysis," this class will cover methods for the analysis
of complex, multidimensional datasets that are collected in the study
of plant, invertebrate, fish, and bird communities. We will also address
the concurrent analysis of the environmental factors that may drive
community distributions. All of this provides the basis for predictive
modeling of distributions across landscapes. General methods we
will cover include ordination (PCA, DCA, NMDS, CCA), clustering (or
classification), and other comparative analyses of data matrices
(ANOSIM, Mantel tests). The “class” (better called a "workshop") is
designed to be applied, meaning that the objective is for students to learn
in a "hands-on" way how to use these tools, and the circumstances under
which their uses are either appropriate or inappropriate.

GEN&WS/HISTORY 346 — TRANS/GENDER IN HISTORICAL PERSPECTIVE
3-4 credits.
Throughout recorded history, humans have conceptualized categories of sex and gender in a variety of ways; some have elaborated just two main sex/genders, others have elaborated more than two categories. At the same time, regardless of how a given culture has defined sex and gender and the behaviors and appearances deemed appropriate, humans have always exceeded those definitions. Quite simply, the determination of male and female and any other sex or gender category is neither obvious nor simple: what is sex, what is gender? Do they reside in the body, behavior, psyche, clothing, or social processes such as racialization? To make matters still more complicated, cultural beliefs about sex/gender have changed across time. How have contacts across cultures through migration and colonization affected people's understanding of sex/gender possibilities and norms? This course focuses on sex/gender crossing and variation in historical contexts including Japan, South Africa, Europe, the African diaspora, and North America. We will consider perspectives of people who themselves passed, crossed, transitioned, transed, or otherwise exceeded their culture's definitions of normative sex/gender. Alongside, we will consider the ways that dominant social institutions reinforced norms, recognized, tolerated, punished and/or celebrated gender variation. We will examine popular culture, medical and legal perspectives, memoir, queer and trans theory, and social movement treatises.

The theme of this course is that what appear to be single global environmental problems are actually composed of many smaller context-specific and place dependent problems or conflicts. Through an interdisciplinary and geographic perspective, these can be understood and addressed at the scale of our lived lives.

GEOG 359 — AUSTRALIA: ENVIRONMENT AND SOCIETY
3 credits.

An introduction to the human and environmental geography of Australia. Australia is a settler country, the scene of indigenous genocide, a former English colony, a mythical unknown, a biophysical puzzle, home to a startling diversity of life, a cradle of modern democracy, and a powerful industrial economy with a rich resource base. It thus serves in many ways as a mirror for the US - even matching the US roughly in size, if not in population. The two countries share many elements of a common history and biogeography and yet the human and environmental geographies of the two countries have traced very different paths into the modern world. This course provides a survey of Australian geology, ecology, society or culture. It will include weekly check-ins with current events in Australia and exercises that connect students to current resource management problems using Google Earth and other tools.

4 credits.
The course learning objectives are: 1) To develop student's ability to conceive real world GIS development projects and design a plan for solving the projects; 2) To provide student the practical experience on managing GIS development projects; 3) To develop student's capacity to solve GIS development problems independently. Students taking this class will achieve these objectives in three stages. Stage 1: The students will be given a GIS development problem which will require them to define the context and the scope of a project to address this problem, to identify the key issues in solving this problems, and to develop implementation plan as well as to implement the plan. In this stage the students will be trained on their independence on developing strategies and solutions to the problems (issues) as they arise during the process of solving a GIS development project. Stage 2: The student is first asked to conceive, in consultation with the instructor(s), a project requiring substantial amount of GIS programming and development, and then to define the scope and to develop the implementation plan as well as to implement the plan for solving this GIS development project. During this stage, the students are trained to derive GIS development projects from real world situation on their own and solve the GIS development problems on their own. The instructors will act as the clients as well as technical advisors to the projects. Stage 3: Students will summarize their experiences by reflections on various aspects of developing and implementing the above two projects to assess the learning outcomes for this classes and to provide recommendations for people who engage in this type of GIS development projects.

GERMAN 275 — KAFKA AND THE KAFKAESQUE
3 credits.

Franz Kafka (1883-1924) is an author whose impact on world literature cannot be overestimated. Born an Austrian Jew and living in the German-speaking Diaspora of Prague, he spent his days making a living as a successful employee of an insurance company and his nights desperately trying to create fiction that met his own exacting expectations. Constantly at odds with the demands of his family, friends, and fiancées/female acquaintances and plagued by poor health, Franz Kafka struggled his entire life long to reconcile the irreconcilable: life and writing. Kafka's texts demand a transdisciplinary and comparative approach. They forged a new level and quality of literature that has triggered innumerable responses in many languages, media, and discourses. The term "Kafkaesque" makes clear that the type and dimension of Kafka's texts have been perceived as strange, uncanny, and resistant to any classification. In the attempt to adopt or imitate the Kafkaesque, other authors situate themselves in the literary tradition of the uncanny, which in part relies on the mystified city of Prague with its long Jewish tradition, as well as on the tradition of Romantic and "Gothic" texts. In this course, we will read a wide selection of texts by Franz Kafka in order to approach an understanding of his universe and prepare ourselves to view this universe in comparison with other contemporary authors as well as authors from other cultures and eras (A. Camus, W. G. Sebald, T. Pynchon, H. Mulisch, P. Roth, H. Murakami). Lectures will also highlight literature, film, and art works in the tradition of the Kafkaesque.

HISTORY 248 — GLOBALIZATION AND CRISES
3-4 credits.

Since 2008, leaders and politicians have constantly been defining, avoiding and responding to political, economic and cultural crisis. Concern about crises is not new and learning about how people around the world have responded to crises in the past could definitely help us respond to our present crises and perhaps pave the way to a better future. This course will examine various economic, political, cultural and intellectual crises from the early modern period to the present, and focus on how people have tried to make sense of them and go beyond them. At the same time, we will attempt to provide a historical framework that takes into account discussions of globalization avant la lettre, such as Janet Abu-Lugod’s now well-known Beyond European Hegemony.

HISTORY 249 — SPORT, RECREATION, & SOCIETY IN THE UNITED STATES
3-4 credits.

As much as we may try to convince ourselves that sport offers an escape from the "real world," constant news of players' strikes, stadium financing controversies, and the lack of diversity in league management remind us that we cannot separate the games we play and watch from the political, social, and cultural contexts in which they are embedded. With this in mind, this course explores how sport has shaped and been shaped by major trends in American social, political, and economic history. Lectures and discussion sections will not focus on player stats or the morning edition of SportsCenter. Instead, students will engage with serious historical arguments and debates about sport's relationship to American capitalism, social movements, and urban development. Readings also provide a diverse set of perspectives on the politics of race, gender, and class in American sport in the twentieth century. Non-sports fans are welcome and encouraged to enroll!

HISTORY 269 — WAR, RACE, AND RELIGION IN EUROPE AND THE UNITED STATES, FROM THE SCRAMBLE FOR AFRICA TO TODAY
3-4 credits.

This course investigates the complex history of European and American violence and war-making through the lens of race and religion. Taking a comparative approach, we analyze several major conflicts of the twentieth century, from World War I to the wars of decolonization, and from the genocide of the Herero peoples to the Armenian Genocide, the Holocaust, and beyond. How did religious forces and racial claims shape these conflicts? How did these wars reinforce the modern notion of the nation-state, and strengthen both racist and anti-racist movements? Key topics in the class include the genealogy of the modern idea of “race” in Europe and the U.S.; the drive towards a world of more homogeneous nation-states after World War I; and the emergence of transnational protest movements opposed to racism, imperialism, antisemitism, and Islamophobia. Drawing on a range of texts, songs, and films, the course will investigate new connections between Europe and the United States. Join us as we take an international look at concepts like race and nation, and try to make sense of extreme violence, war-making, and the pre-requisites of peace.

HISTORY 270 — EASTERN EUROPE SINCE 1900
3-4 credits.

This class introduces students to the dramatic history of twentieth-century Eastern Europe, a place where imperialism, Nazism, Communism, genocide, democracy, and capitalism all left their mark. The course revolves around three interrelated themes—war, revolution, and society—all of which allow us to place Eastern Europe within broader comparative contexts. In addition to exploring significant political, economic, and cultural changes, we’ll discover how ordinary people—including workers, peasants, women, and children—experienced attempts to change the region and its people. Throughout, we will discuss how East Europeans continue to wrestle with the ghosts of their past today.

HISTORY/GEN&WS 346 — TRANS/GENDER IN HISTORICAL
PERSPECTIVE
3-4 credits.

Throughout recorded history, humans have conceptualized categories of
sex and gender in a variety of ways; some have elaborated just two main
sex/genders, others have elaborated more than two categories. At
the same time, regardless of how a given culture has defined sex and gender
and the behaviors and appearances deemed appropriate, humans have
always exceeded those definitions. Quite simply, the determination of
male and female and any other sex or gender category is neither obvious
nor simple: what is sex, what is gender? Do they reside in the body,
behavior, psyche, clothing, or social processes such as racialization?
To make matters still more complicated, cultural beliefs about sex/
gender have changed across time. How have contacts across cultures
through migration and colonization affected people's understanding of
sex/gender possibilities and norms? This course focuses on sex/gender
crossing and variation in historical contexts including Japan, South
Africa, Europe, the African diaspora, and North America. We will consider
perspectives of people who themselves passed, crossed, transitioned,
transed, or otherwise exceeded their culture's definitions of normative
sex/gender. Alongside, we will consider the ways that dominant social
institutions reinforced norms, recognized, tolerated, punished and/or
celebrated gender variation. We will examine popular culture, medical and
legal perspectives, memoir, queer and trans theory, and social movement
treatises.

HISTORY 350 — THE FIRST WORLD WAR AND THE SHAPING OF TWENTIETH-CENTURY EUROPE
3-4 credits.

The experience and legacy of the First World War has been linked to nearly every social, cultural, and political transformation that marked the short century that followed: mobilization and the experience of total war transformed the relationships between governments and citizens, between men and women, and between social classes. Europeans experienced death on an unprecedented scale and came to terms with new forms of industrialized warfare, from the use of poison gas to modern practices of genocide. Europeans now learned to live with violence, both during as well as after the war, and found new ways to mourn or remember the dead. This course will explore such themes. Using a wide variety of contemporary sources -- memoirs, essays, poems, or cinematic representations -- we will try to situate the upheaval of 1914-1918 within the larger framework of twentieth-century European history.

3-4 credits.

Explores the French Revolution and the Age of Napoleon. Why did Revolution break out in one of the most powerful and traditional monarchies of Europe? What were the roots of discontent and the sources of revolutionary ideas? Probes the exciting twists and turns of revolutionary politics and the attempt to spread “liberty equality” into ordinary life, even abolishing slavery in response to massive slave revolt in the French colonies. Asks how the French interacted with a transnational revolutionary movement across Europe, the US, and the Atlantic world. Though focused on a specific revolutionary era, the course also aims to reflect on timeless questions: Why is it so difficult to create democracy? Is violence ever justified to overcome oppression and injustice? Finally, why did this experiment in radical democracy also unleash the Terror and launch Napoleon Bonaparte, the politician and general who built an astonishing European Empire? And how did he pull it off for as long as he did?

HISTORY/E A STDs 363 — CHINA AND WORLD WAR II IN ASIA
3-4 credits.

This course is intended to help students understand World War II from the perspective of Asia. The focus is not only on the American and Japanese roles in the war but also on lesser, often overlooked participants such as China, Korea, and Southeast Asia. The course will focus not only on the diplomatic, political, and military situation of wartime Asia, but also on perceptions and experiences of the war from those most heavily affected by it: those experiencing it on the ground. Understanding this war is critical for helping us understand contemporary Asia. The foundations of the Cold War and the post-Cold War world that we live in today were forged on battlefields in mainland China, Burma, small islands in the Pacific, and in the skies over the archipelago of Japan. In order to provide the background and understand the legacies, this course covers an extended time frame, beginning in the 19th century with the arrival of the West in Asia and continues into the 1950s.

HISTORY/POI SCI/PUB AFFR 724 — THE POLITICS OF PERSUASION: SOFT POWER IN EUROPE AND THE U.S.
1-3 credits.
How powerful is non-military power? What are its vectors and its limits? International relations theorists have defined soft power as "the ability to get what you want through attraction rather than coercion." This graduate seminar will put this notion to the test. We will investigate how elites, interest groups, religious bodies, and nation-states seek to exercise hegemony in the international order through non-violent means. How was "soft power" implemented on the ground in the 20th century and how did its use transform international relations? To probe these questions, we will focus on a series of case studies in European and U.S. international history. Topics covered include the expansion of capitalism and consumer culture; the globalization of international legal instruments and human rights claims; and de-secularization, religious radicalism, and counter-insurgency. In the process of analyzing our case studies, we will refine our analytical vocabulary. Drawing on recent work in international relations, political theory, and international history, we will probe the meaning and utility of concepts like normative power, hegemony, cultural capital, and public diplomacy.

HIST SCI/ENVIR ST/HISTORY 125 — GREEN SCREEN: ENVIRONMENTAL PERSPECTIVES THROUGH FILM
3 credits.

From Teddy Roosevelt's 1909 African safari to the Hollywood blockbuster King Kong, from the world of Walt Disney to The March of the Penguins, cinema has been a powerful force in shaping public and scientific understanding of nature throughout the twentieth and twenty-first century. How can film shed light on changing environmental ideas and beliefs in American thought, politics, and culture? And how can we come to see and appreciate contested issues of race, class, and gender in nature on screen? This course will explore such questions as we come to understand the role of film in helping to define the contours of past, present, and future environmental visions in the United States, and their impact on the real world struggles of people and wildlife throughout the world.

From medical advancements to environmental crises and global food shortages, the life sciences are implicated in some of the most pressing social issues of our time. In the first unit, we investigate the origins of the institutions, technologies, and styles of practice that characterize contemporary biology, such as the use of mice as "model organisms" for understanding human diseases. The second unit examines biological controversies such as the introduction of genetically modified plants into the food supply. The final unit asks how biological facts and theories have been and continue to be used as a source for understanding ourselves.

HORT 350 — PLANTS AND HUMAN WELLBEING

2 credits.

Plants provide not only the foundation of food, clothing, and shelter essential for human existence, but also some of the key raw materials for transcendence and abstraction through music, art, and spirituality. Since antiquity, we have co-evolved with plants and their derivative products, with each exerting a domesticate force on the other. It is, for example, impossible to think of our modern life without its plant-based accompaniments in the form of cotton, sugar, bread, coffee, and wood. Yet they are so ubiquitous we may forget they all derive from plants discovered, domesticated, bred, and farmed for millennia in a never-ending pursuit to improve our wellbeing. This course will explore major points of intersection between plants and human wellbeing from a horticultural point of view. Each week, we will highlight a plant or group of plants that represent a primary commodity or resource through which humans have pursued their own aims. We will examine this plant with hands-on demonstrations and produce extracts and preparations to more deeply explore its effects and impacts in human society. This course is open to all students, and has no prerequisites.

HORT 378 — TROPICAL HORTICULTURAL SYSTEMS INTERNATIONAL FIELD STUDY
2 credits.

This international field study will meet during the winter intercession in a tropical country in Central America. We will reflect on the role of plants in our daily lives and the effects that our daily choices have on the environment, human health, conflicts, poverty, and development. This course will provide an opportunity to develop a holistic appreciation of horticulture by highlighting the interactions between plants and society. We will discuss some of the social, scientific and environmental challenges that conventional, sustainable and organic horticulture practices face in the production, marketing, and use of tropical crops. The field study will provide an opportunity to contextualize what students learned during the course “Tropical Horticultural Systems” (HORT 376). We will visit diverse agricultural systems, such as small farms, large-scale operations, market growers, and industrial export businesses. In addition, we will visit agronomic centers, botanical gardens, herbaria, germplasm banks, and nature preserves.

INTER-HE 201 — BELONGING, PURPOSE AND THE ECOLOGY OF HUMAN HAPPINESS: ECOYOU
3 credits.

This course explores the art and science of purposeful living by integrating academic knowledge with issues real and relevant to students' lives including: identity and belonging; happiness, purpose and meaning; self-awareness and self-presentation; romantic, peer and family relationships; material culture, consumer behavior and financial well-being; and connections to community, culture, and society. From the microbes that inhabit our guts to political revolutions sparked by a tweet, human lives are embedded in an ecology of complex, interdependent systems. Using the lens of Human Ecology, you will address "big questions" like: How am I connected to others and to larger systems? What brings happiness and works for the "greater good" in human lives? An overarching goal of the course is to help you understand yourself as embedded in the web of ever-evolving interconnected networks, an "EcoYou." Human Ecology is a systems approach to studying and understanding relationships between humans and their everyday environments; it is a civic and socially conscious orientation that is committed to understanding and improving the quality of human lives. Human Ecology is inherently interdisciplinary drawing on research, theories and methods from diverse fields such as sociology, psychology, anthropology, economics, public health, biology, and art and design.

INTL ST/POLI SCI 325 — SOCIAL MOVEMENTS AND REVOLUTIONS IN LATIN AMERICA
3-4 credits.
An introduction to the major empirical and theoretical themes in the study of social movements and politics in Latin America. While it is impossible to cover every theoretical approach or Latin American case during the semester, the course should give students the tools to begin to think critically about where and why people engage in collective action. We will develop and hone these tools through thinking about Latin American cases, paying specific attention to revolutions, social movements, and riots. The course is designed in three parts. It begins by exposing students to the dominant theoretical paradigms in the study of contentious politics as well as some prominent critiques. The course then turns to empirical themes in Latin American revolutions, challenging students to use and question the theoretical tools to which they have already been exposed. The final part of the course looks to social movements in Latin America. Cases will focus on challenges to dictatorships, identity-based movements, and resistance to globalization.

The course considers how India comports with standard theories in comparative politics and how standard theories might be revised in light of the Indian case. The course maps variation on the sub-national and regional level. The course will ultimately consider reforms proposed by the Indian state to further democratic and economic development and to reduce conflict. Students will learn about India’s politics in a structured manner, and will gain an appreciation of the power and limitations of the political science method.

JOURN/L IS 677 — CONCEPTS AND TOOLS FOR DATA ANALYSIS AND VISUALIZATION
3 credits.

Ours has become a data society. Like at no other time, our world—the natural world, from storm systems to diseases; governments and companies; and our conversations with friends and relatives, even our movements—is recorded in digital format. A few years ago, Google CEO Eric Schmidt famously stated that “There was 5 exabytes of information created between the dawn of civilization through 2003, but that much information is now created every 2 days, and the pace is increasing.” (An exabyte is 1 trillion megabytes.) The result is that professional communicators in journalism and mass communication, as well as researchers and private firms, now literally have more data than they know what to do with. There is tremendous need across our society for people who are able to use data to investigate important questions, draw useful insights from those data, and communicate those insights to others—and also to be realistic and honest about what data can and cannot do. That is what this class is for: it is an introduction to the world of data, how data can be used to answer questions and those answers can be effectively and ethically communicated. More specifically, we will offer a combination of conceptual training, instruction in specific tools for data analysis and visualization, and the opportunity to put new skills to use in a final project. This course is intended for Juniors, Seniors and Graduate students and by instructor permission. Research methods experience preferred.

How powerful is non-military power? What are its vectors and its limits? International relations theorists have defined soft power as "the ability to get what you want through attraction rather than coercion." This graduate seminar will put this notion to the test. We will investigate how elites, interest groups, religious bodies, and nation-states seek to exercise hegemony in the international order through non-violent means. How was "soft power" implemented on the ground in the 20th century - and how did its use transform international relations? To probe these questions, we will focus on a series of case studies in European and U.S. international history. Topics covered include the expansion of capitalism and consumer culture; the globalization of international legal instruments and human rights claims; and de-secularization, religious radicalism, and counter-insurgency. In the process of analyzing our case studies, we will refine our analytical vocabulary. Drawing on recent work in international relations, political theory, and international history, we will probe the meaning and utility of concepts like normative power, hegemony, cultural capital, and public diplomacy. This course is open to Masters and PhD students from a range of disciplines.

L I S 350 — HISTORY AND FUTURE OF BOOKS
3 credits.
This course is framed by a question about what books are, what books have been, and what books might be: past, present, and future. The course also assumes that “book” is a capacious term, or a placeholder one, for an object that becomes the site of questions and debates about a variety of media, expressions, and recording practices. We live in a moment of rapid media evolution, and yet we have seen the book endure and change as a form. Academic fields including book history, digital humanities, media studies, and human computer interaction (to name only a few) all have something at stake in the form of the book - not to mention industry-oriented interests in e-readers, book retail, publishing - and likewise this course will approach the book from a number of perspectives. Our primary goal is to understand the book (and, in a wider sense, information) as an active technology that shapes peoples, perceptions, and cultures rather than serving as a passive receptacle of them. This course also meets the requirements for Comm B, which means we will be thinking about our own written and spoken productions by way of this material. Includes hands on research exercises in UW special collections library and Wisconsin Historical Society archive collections.

L I S/JOURN 677 — CONCEPTS AND TOOLS FOR DATA ANALYSIS AND VISUALIZATION
3 credits.

Ours has become a data society. Like at no other time, our world—the natural world, from storm systems to diseases; governments and companies; and our conversations with friends and relatives, even our movements—is recorded in digital format. A few years ago, Google CEO Eric Schmidt famously stated that "There was 5 exabytes of information created between the dawn of civilization through 2003, but that much information is now created every 2 days, and the pace is increasing." (An exabyte is 1 trillion megabytes.) The result is that professional communicators in journalism and mass communication, as well as researchers and private firms, now literally have more data than they know what to do with. There is tremendous need across our society for people who are able to use data to investigate important questions, draw useful insights from those data, and communicate those insights to others—and also to be realistic and honest about what data can and cannot do. That is what this class is for: it is an introduction to the world of data, how data can be used to answer questions and those answers can be effectively and ethically communicated. More specifically, we will offer a combination of conceptual training, instruction in specific tools for data analysis and visualization, and the opportunity to put new skills to use in a final project. This course is intended for Juniors, Seniors and Graduate students and by instructor permission. Research methods experience preferred.

MEDICAL HISTORY AND BIOETHICS

MED HIST/HIST SCI 133 — BIOLOGY AND SOCIETY, 1950 - TODAY
3 credits.

From medical advancements to environmental crises and global food shortages, the life sciences are implicated in some of the most pressing social issues of our time. This course explores events in the history of biology from the mid-twentieth century to today, and examines how developments in this science have shaped and are shaped by society. In the first unit, we investigate the origins of the institutions, technologies, and styles of practice that characterize contemporary biology, such as the use of mice as "model organisms" for understanding human diseases. The second unit examines biological controversies such as the introduction of genetically modified plants into the food supply. The final unit asks how biological facts and theories have been and continue to be used as a source for understanding ourselves.

3 credits.

Focuses on ethical issues implicated in a population-level approach to disease prevention and health promotion. Explores prominent theoretical approaches to public health ethics and engages with several ethical tensions. Issues discussed can include: the use of coercive or intrusive public health interventions that restrict individual freedom, infringe upon individual privacy, and/or invite individual harm (or risks of harm); the justification of paternalistic measures in societies or sub-populations that seemingly indulge in pleasurable yet unhealthy behaviors; the extent to which societies should hold individuals responsible for their health conditions; the need to decide who receives life-saving treatment or vaccination when not all can; the need to choose between the identifiable victims we can save with expensive measures here and now and the more numerous unidentifiable victims we could save in the future with the same monetary investment; the trade-offs between maximizing aggregate health benefits and addressing the special needs of vulnerable social sub-groups and individuals; climate changes and intergenerational justice; ethical issues in international pharmaceutical research, and the need to establish reasonable limits to public health demands in a world where health outcomes are profoundly influenced by policies in other domains (such as transportation, housing, unemployment, and education) that generate their own ethical problems and imperatives.

3 credits.

This course provides an overview of the field of environmental health, using a systems thinking approach. Systems thinking recognizes that environmental health problem solving is complex and that solutions in one area may have positive or negative impacts on other areas. As an overview it provides an introduction to the history of environmental health within the field of public health from the local to the federal and global level. It will introduce multiple disciplines, methods and approaches to numerous environmental health topics. It includes introduction to methods and tools necessary for assessing human health risks from a variety of environmental hazards and exposures found in air, land, and water with a focus on physical and chemical risks. Additional details regarding specific hazard, exposure and health outcome data and their relationship to environmental health risk assessment, environmental health decision-making and management form a public health practice perspective will be discussed. Students will become familiar with the practice of environmental health lectures and case studies. A primary goal of this course is to address core environmental health competencies for Masters of Public Health students. In addition, this course is designed to help students think critically about complex problems and practice effective communication both in written as well as oral forms of communication. As such, it will provide an overview of fundamental information and tools that public health practitioners will need to know how to use. It will also lay the foundation for more high-level courses in the field of environmental health for those wishing to pursue aspects of this field in more detail. It is aimed at students with a diverse knowledge set and background coming into the course, a general sense of basic biology and chemistry will be helpful, but not necessary.

**NEURODPT/PSYCH/ZOOLOGY 674 — BEHAVIORAL NEUROENDOCRINOLOGY SEMINAR**

2 credits.

Behavior results from a complex interplay among hormones, the brain, and environmental factors. Behaviors and their underlying neural substrates have evolved in response to specific environmental conditions, resulting in vast species diversity in behavioral and neuroendocrine solutions to environmental problems. This seminar is designed to explore the primary literature on the neuroendocrine underpinnings of behavior spanning from feeding to sex differences in complex social behaviors. A range of taxonomic groups will be discussed, including (but not limited to) mammals, birds, and fish. A background in neuroscience and/or endocrinology is strongly recommended.
