BUSINESS: ACCOUNTING AND BUSINESS ANALYSIS, MS

LEARNING OUTCOMES

LEARNING OUTCOMES

1. Implement IT governance, internal control, and technology practices to reliably generate, collect and process transactional data in accounting information systems to generate large datasets to support organizational strategies.
2. Utilize advanced analytical techniques and emerging technologies used by accounting professionals to identify and address accounting and business questions with data-driven insights for decision-making.
3. Apply professional judgements about the application of financial reporting, taxation, or audit regulations for business reporting and successful strategic and operational decision-making within organizations.
