Admissions to the Civil and Environmental Engineering: Water Resources Engineering, M.S. have been suspended as of summer 2021 and will be discontinued as of fall 2022. If you have any questions, please contact the department.

This is a named option within Civil and Environmental Engineering M.S. (http://guide.wisc.edu/graduate/civil-environmental-engineering/civil-environmental-engineering-ms/) It is based on coursework only (no research-based thesis). This program will be replaced by Civil and Environmental Engineering: Professional M.S. (http://guide.wisc.edu/graduate/civil-environmental-engineering/civil-environmental-engineering-ms/civil-environmental-engineering-professional-ms/) in fall 2021.

The Water Resources Engineering named option in the M.S.–CEE from the Department of Civil and Environmental Engineering (https://www.engr.wisc.edu/department/civil-environmental-engineering/academics/accelerated-master-science-programs-civil-environmental-engineering/) at the University of Wisconsin–Madison teaches you the scientific and engineering skills to evaluate, plan, and operate water resource and environmental systems.

Our program takes just one year to complete, and focuses on a systems-based approach to managing water resources for societal benefit. You learn principles of water movement through the environment and understand how to best utilize it for municipal and industrial uses, agriculture, and natural ecosystems. You also solve practical problems in hydrology; fluid mechanics; environmental flows in rivers, lakes, and coastal environments; and water resource management.

Build the expertise to analyze and design systems that control all aspects of the distribution of water to meet the needs of humans and improve natural resource management. You also analyze and solve scientific and engineering questions through field methods, laboratory experiments, remote-sensing techniques, numerical and statistical modeling, and analytic approaches.

With an M.S.–CEE named option in Water Resources Engineering at UW–Madison, you develop strong quantitative skills in modeling, systems thinking, and sustainability science. Graduate ready to succeed in consulting firms, federal and state laboratories and agencies, and municipal and county governments, and place yourself at the forefront of rapidly developing and world-changing innovations.
