Graduate training in genetics emphasizes study and research leading to a PhD degree in genetics. A master’s degree in medical genetics with specialized training in genetic counseling is also available. For more information on a master’s degree in genetic counseling, see Genetic Counseling (https://guide.wisc.edu/medicine/medicine-public-health-school-wide/genetic-counselor-studies-mgcs/).

LABORATORY OF GENETICS

The laboratory consists of two departments: Genetics, in the College of Agricultural and Life Sciences; and Medical Genetics, in the School of Medicine and Public Health. Although administratively distinct, these two departments function as one at both the faculty and student levels.
