MATERIALS SCIENCE
AND ENGINEERING:
MATERIALS
ENGINEERING, M.S.

This is a non-thesis named option within the Materials Science and Engineering M.S. (http://guide.wisc.edu/graduate/materials-science-engineering/materials-science-engineering-ms/)

IS THIS PROGRAM RIGHT FOR YOU?

As a student in the UW–Madison accelerated master’s in materials engineering, you can choose from three focus areas. Taking the Nanomaterials and Nanoengineering path, you can develop a unique understanding of innovative applications such as nanomaterial synthesis, thin film deposition, polymeric materials, and crystallography. The Engineering Materials and Processes path offers in-depth knowledge of phase transformation, deformation, corrosion and heat treatment, among others. The Semiconductor Materials and Manufacturing for Microelectronics path offers depth education on the microstructure, fabrication, and properties of electronic, optical, and magnetic materials and semiconductors. It aims to prepare students to make an impact in the semiconductor sector as it develops new materials and fabrication methods needed to create future generations of advanced computation, communications, quantum, and sensing devices. All focus areas include techniques for X-ray scattering, atomistic modeling, molecular dynamics and more.

If you have questions, please contact Materials Science and Engineering Graduate Admissions at msaegradadmission@engr.wisc.edu. Please see admission requirements on the Admissions tab.
