

SOCIOLOGY, PH.D.

LEARNING OUTCOMES

1. Demonstrate a broad understanding of major theories, methodologies, and research findings in the sociological literature. Develop critical thinking skills that empower them to analyze strengths and weaknesses in the existing literature, identify knowledge gaps, evaluate evidence, synthesize information, and form conclusions. Attain the skills necessary to teach and conduct research with intellectual and ethical rigor, care, and creativity.
2. Create individualized programs to suit their specific interests and goals. Formulate ideas and develop research questions, design feasible research projects, use appropriate methodologies, analyze and interpret the resulting data, and identify avenues for further exploration. Their original research will expand the current boundaries of knowledge in the field.
3. Write seminar papers and conduct dissertation research, prepare and submit manuscripts resulting from their research for publication in respected journals, and submit papers for presentation at professional conferences. Their independent research will contribute substantively to scholarship in the field.
4. Demonstrate breadth within their learning experience by taking at least four seminars, completing a minor area of study, and passing written preliminary exams in two different subfields. In addition, because our program emphasizes collective responsibility for training, students will be supervised and mentored by several faculty members with a range of expertise. They will also learn to mentor others.
5. Advance the contributions of sociological study to society by conducting research that explores complex ideas, analyzes quantitative and qualitative data, and disseminates new knowledge. Contribute to the vast body of scholarship and applied work that leads to the improvement of society. Share theory, methodology, and the results of research with the undergraduate students whom they teach and thereby foster an understanding of how social life works, what causes social change, and why humans behave in the ways they do.
6. Communicate complex ideas in a clear, organized, engaging manner to diverse audiences. Craft effective grant proposals; gather, manage, and analyze data; write papers that are thought-provoking, concise, and persuasive; present research informatively; listen with care and patience; and give and receive feedback orally and in writing.
7. Foster ethical and professional conduct by demonstrating respect for and having positive interactions with faculty members and staff, graduate student colleagues, and undergraduate students. Foster such conduct by the scientific rigor and honesty with which they design research, collect and analyze data, and interpret and report results.
8. (Career Preparation) Prepare for a range of sustainable careers in academia as well as government, private industry, and the nonprofit sector. Develop flexibility, leadership, and broadly applicable skills in critical thinking, problem solving, project management, collaboration, and communication.
