GENETICS IN A MODERN WORLD, CERTIFICATE

LEARNING OUTCOMES

LEARNING OUTCOMES

- 1. Explain current topics in genetics and genomics by applying basic genetic knowledge and simple scientific methodologies from current research.
- Engage in dialogue about the implications of genetics and genomics on everyday life, addressing ethical, societal, legal, and/or scientific perspectives.
- 3. Describe applications, practices, and policies to address ethical, economic, environmental, legal, and/or social challenges and opportunities created by genomics- based innovations.
- Integrate life sciences and humanities/social sciences perspectives to address current questions related to ethics, history, social science, and/or public policy, and their interaction with contemporary genetics and genetics research.
- 5. Present your interdisciplinary perspective on the relationship between genomes and society to diverse audiences.
