Students are assigned a professional advisor who assists them with building their personalized Wisconsin Experience — including a strong curriculum to match student interests — and provides advising on career paths including graduate school or pursuing advanced degrees in the health sciences.

Professors provide mentorship to students in the program through work on faculty-led research, including learning research paper- and grant-writing skills, communicating about scientific concepts, and presenting research results to different audiences.

Graduates of the program are working as physicians, scientists, physician assistants, nutrition product developers, food service directors, nutrition educators, wellness directors, and professors; and have a wide range of employers, including hospitals, clinics, nursing homes, school districts, food companies, universities, grocery stores, and non-profit organizations.

Alumni are recognized for their skills in healthcare, leadership, clinical research, communication, critical thinking, and problem-solving.
