ELECTRICAL AND COMPUTER ENGINEERING

Electrical engineers (EE) design and develop anything and everything that uses electricity. From the power systems that bring electricity to our homes and communications systems that allow us to keep in touch with family and friends, to the electronic devices, electrical appliances, computers, sensors, and medical equipment that shape our everyday lives. Typical careers may find an EE collaborating with medical doctors or astronauts in the space program, designing advanced automotive and transportation systems, and interacting with other engineers and professionals. Many EEs work as scientists, inventing new kinds of electronic technology, instrumentation, and devices to help people.

Electrical engineers design, develop, analyze, research, and manufacture systems such as those for power generation distribution, communication, control, and instrumentation. Electrical engineers are also concerned with the devices that make up these systems, such as transistors, integrated circuits, rotating machines, antennas, and fusion plasma confinement devices. Low-power, reliable integrated circuits allow dramatic improvements that have driven the revolution in communications and computation. High-power transistors in combination with electronic controls are serving as the foundation for new ways of efficiently utilizing electrical power.

Computer engineers design, develop, analyze, research, and manufacture hardware, software, and systems that process, store, and convey digital information. These systems include personal computers, workstations, mainframe computers, and embedded digital systems. Embedded systems consist of one to many computers within other products such as aircraft, automobiles, communication switching systems, networking components, biomedical instrumentation, and industrial automation systems. These systems are characterized by the use of digital electronic hardware and software in performing useful tasks. Computer software in combination with digital integrated circuits provides the foundation for the current revolution in computers and communications. This focus on software and digital hardware distinguishes the computer engineer from the electrical engineer.

The curriculum in the Department of Electrical and Computer Engineering requires a strong background in mathematics, physics, and computer science. In addition to basic course requirements in these areas, elective credits in the curriculum permit the student to pursue more advanced courses in these areas or in other fields, such as chemistry, biology, and mechanics. Additional electives in liberal studies broaden the programs to include such areas as economics, sociology, psychology, and history.

The electrical engineering and computer engineering programs share many courses in the first few semesters, including digital systems, electrical circuits, and electromagnetic fields. Computer engineering students take additional courses in computer science to provide the software part of their background. In the junior year, the electrical engineering program focuses on areas such as electromagnetic fields and analog electronics whereas computer engineering deals with computer hardware design and combined hardware/software design concepts. Technical elective freedom in both curricula makes it possible for students to choose from approximately 50 more specialized courses at the junior and senior levels in electrical and computer engineering, as well as courses from other departments. In both curricula, a student can choose a broad program covering an introductory treatment of a variety of areas or focus in one or two specialized areas. An advising program, beginning in the first year, helps students plan their program.

To provide students with hands-on experience in electrical and computer engineering, specialized lab courses are offered at the senior level. For example, one involves the design and fabrication of integrated circuits and the other design and prototyping of a computer. Both classroom instruction and lab work are offered in signal processing and in embedded systems, with microprocessors and personal computers incorporated into larger systems. Independent study and design projects are encouraged at the senior level and an honors research program is available which spans multiple years of the undergraduate program.

Although the B.S. in electrical engineering and B.S. in computer engineering programs are intended to prepare students for immediate entry into the profession of engineering, increasingly, students find an additional year or more of study leading to the M.S. degree very desirable. The Ph.D. degree is the most advanced degree and emphasizes training in research.

DEGREES/MAJORS/CERTIFICATES

- Computer Engineering, B.S. (http://guide.wisc.edu/undergraduate/engineering/electrical-computer-engineering/computer-engineering-bs/)
- Electrical Engineering, B.S. (http://guide.wisc.edu/undergraduate/engineering/electrical-computer-engineering/electrical-engineering-bs/)

PEOPLE

PROFESSORS
Susan Hagness (Chair)
Nader Behdad
Daniel Botez
Azadeh Davoodi (Associate Chair for Undergraduate Studies)
John A. Gubner (Associate Chair for Operations)
Yu Hen Hu
Hongrui Jiang (Associate Chair for Graduate Studies)
Irena Knezevic
Bernard Lesieutre
Mikko Lipasti
Zhenqiang Ma
Luke J. Mawst
Robert Nowak
Parameswaran Ramanathan
Bulent Sarlioglu
William A. Sethares
Daniel van der Weide
Giri Venkataramanan
Amy E. Wendt
Zongfu Yu

ASSOCIATE PROFESSORS
Kassem Fawaz (Associate Chair for Research)
Mikhail Kats
Younghyun Kim
Daniel Ludois
Paul H. Milenkovic  
Umit Ogras  
Dimitris Papailiopoulos  
Line Roald  
Andreas Velten  

**ASSISTANT PROFESSORS**  
Joseph Andrews  
Jennifer Choy  
Grigoris Chrysos  
Jeremy Coulson  
Dominic Gross  
Chirag Gupta  
Tsung-Wei Huang  
Robert Jacobberger  
Akhilesh Jaiswal  
Bhuvana Krishnaswamy  
Kangwook Lee  
Chu Ma  
Pedro Morgado  
Shubhra Pasayat  
Jinia Roy  
Joshua San Miguel  
Manish Singh  
Hihan Sun  
Eric Tervo  
Ramya Korlakai Vinayak  
Ying Wang  
Feng Ye  
Lei Zhou  

**TEACHING FACULTY**  
Mark C. Allie  
Eric Hoffman  
Joe Krachey  
Srdjan Milicic  

**TEACHING PROFESSOR**  
Eduardo Arvelo  
Setareh Behroozi  
Steven Fredette  
Nathan Strachen

**RESOURCES AND SCHOLARSHIPS**

**FACILITIES**

Facilities available for instruction and research include:

- CAE (Computer-Aided Engineering) and ECE Laboratory Computers
- Center for Plasma Theory and Computation Computers
- Cross-Disciplinary Electromagnetics Laboratory
- Digital Engineering Lab
- Digital Logic and Microprocessor Lab
- Electronics Lab
- Embedded Systems Lab
- Grainger Electric Machines and Power Lab
- High-Frequency Engineering Lab
- HSX Plasma Laboratory
- Integrated Circuit Facility
- Lab for Molecular Scale Engineering
- Photonics Lab
- Plasma Processing & Technology Laboratory
- Plexus Collaboratory
- Power Electronics Lab
- Qualcomm Design Labs
- Signal Processing Lab
- Vacuum Electronic Devices Lab
- Wisconsin Advanced Network Design, Experimentation, and Research (WANDER) Lab
