## ATMOSPHERIC AND OCEANIC SCIENCES, BA

## LEARNING OUTCOMES

## LEARNING OUTCOMES

- 1. Recognize and describe the fundamental principles and processes associated with the dynamics and thermodynamics of geophysical fluid flows, the basic physics of clouds, aerosols, and precipitation.
- Recognize and describe the fundamental principles and processes associated with radiation and atmospheric and oceanic radiative transfer.
- Demonstrate critical thinking skills by identifying a problem, identifying the required information to solve that problem; and formulating and interpreting solutions to that problem using appropriate analytical and/or computational techniques.
- 4. Apply diagnostic tools to to analyses and numerical model output to diagnose, describe, and interpret the fundamental dynamical and thermodynamical processes at work in synoptic-scale, mesoscale, and large-scale weather systems and climate circulations.
- 5. Apply fundamental radiative transfer theory to interpret remotelysensed observations of atmospheric and oceanic phenomena.
- 6. Design and conduct experiments and/or analyze data to test hypotheses in an area of atmospheric or climate sciences.
- 7. Demonstrate effective scientific communication skills through development and delivery of oral presentations (including poster presentations) and written reports and case studies.
