

AGING STUDIES, CERTIFICATE

LEARNING OUTCOMES

LEARNING OUTCOMES

1. Understand the interdisciplinary nature of aging as a combination of psychological, social, and biological processes.
2. Identify and dispel commonly held myths and stereotypes regarding older adults and aging.
3. Recognize how older adults are impacted by evolving intersecting identities such as age, race, ethnicity, gender, income, class, sexual orientation, and ability.
4. Compare and contrast current theory and research in interdisciplinary gerontology both in the U.S. and globally.
5. Evaluate how individual and compounded biopsychosocial issues can affect an older adult's overall health and wellbeing, as well as those who work with and care for them.
